PRESS RELEASE
FOR IMMEDIATE RELEASE

January 23, 2022

Contact: Chief Medical Officer,
Chair, Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

TWELVE (12) NEW PCR AND THIRTY-NINE (39) RAPID ANTIGEN CASES
TWO (2) DEATHS

Eight (8) new PCR COVID-19 positive cases were reported from thirty-six (36) samples collected on Friday January 21st, 2022, resulting in a positivity of 22.2%. Nineteen (19) new rapid antigen positive results were reported from flu clinics on January 21st, 2022.

Four (4) new PCR COVID-19 positive cases were reported from eleven (11) samples collected on Saturday January 22nd, 2022, resulting in a positivity of 36.4%. Twenty (20) new rapid antigen positive results were reported from flu clinics on January 22nd, 2022.

The COVID-19 testing algorithm, based on the WHO recommendations appropriate for this phase on the current outbreak, reduces the number of RT-PCR tests conducted, relying primarily on rapid antigen tests and clinical diagnosis.

HOSPITAL ADMISSIONS

There are currently no patients admitted for COVID-19 at the Argyle Isolation Facility. Twenty-three (23) patients are admitted to the COVID-19 ward at the Milton Cato Memorial Hospital.

Five (5) of the admitted patients are vaccinated, one (1) patient is partially vaccinated, and seventeen (17) patients are unvaccinated.

COVID-19 DEATHS

Two (2) new deaths were recorded over the reporting period.

A 45-year-old female tested positive for COVID-19 on January 14th, 2022 and was admitted to the isolation ward at the Milton Cato Memorial Hospital. She died on January 22nd, 2022 of COVID-19 pneumonia.

continued on next page…

continued from previous page...

A 61-year-old female tested positive for COVID-19 on January 16th, 2022 and was admitted to the isolation ward at the Milton Cato Memorial Hospital. The patient had underlying conditions and died on January 23rd, 2022 of COVID-19 pneumonia.

Both patients were unvaccinated. Their deaths bring the death toll from COVID-19 to ninety-two (92).

COVID-19 SUMMARY

Twenty-one (21) recoveries were noted over the reporting period. Eight hundred and seventy-two (872) cases are currently active and ninety-two (92) persons with COVID-19 have died. Six thousand six hundred and sixty (6660) cases of COVID-19 and five thousand and six hundred and ninety-six (5696) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of Omicron and Delta as the dominant variants in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone are strongly recommended. The public is reminded to always wear a properly fitting mask, get vaccinated and boosted and seek care early.

PRESS RELEASE
FOR IMMEDIATE RELEASE

January 21, 2022

Contact: Chief Medical Officer,
Chair, Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

THIRTY-ONE (31) NEW PCR AND NINETY-FIVE (95) RAPID ANTIGEN CASES

Eighteen (18) new PCR COVID-19 positive cases were reported from twenty-nine (29) samples collected on Wednesday January 19th, 2022, resulting in a positivity of 62.1%. Fifty (50) new rapid antigen positive results were reported from flu clinics on January 19th, 2022.

Thirteen (13) new PCR COVID-19 positive cases were reported from twenty-six (26) samples collected on Thursday January 20th, 2022, resulting in a positivity of 50.0%. Forty-five (45) new rapid antigen positive results were reported from flu clinics on January 20th, 2022.

The current COVID-19 testing algorithm, based on the WHO recommendations appropriate for this phase on the current outbreak, reduces the number of RT-PCR tests conducted, relying more on rapid antigen and clinical diagnosis.

HOSPITAL ADMISSIONS

There are currently no patients admitted for COVID-19 at the Argyle Isolation Facility. Twenty-eight (28) patients are admitted to the COVID-19 ward at the Milton Cato Memorial Hospital, two (2) of whom are pregnant and one (1) of whom is younger than eighteen.

Six (6) of the admitted patients are vaccinated, two (2) patient are partially vaccinated, and twenty (20) patients are unvaccinated.

COVID-19 DEATHS

No new deaths were recorded over the reporting period.

COVID-19 SUMMARY

Twenty-three (23) recoveries were noted over the reporting period. Eight hundred and eighty-one (881) cases are currently active and ninety (90) persons with COVID-19 have died. Six thousand six hundred and forty-six (6646) cases of COVID-19 and five thousand and six hundred and seventy-five (5675) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of the Omicron as the dominant variant in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone are strongly recommended. TEN (10) NEW PCR AND TWO HUNDRED AND THIRTEEN (213) RAPID ANTIGEN CASES
TWO (2) DEATHS

Three (3) new PCR COVID-19 positive cases were reported from twenty (20) samples collected on Monday January 17th, 2022, resulting in a positivity of 15.0%. One hundred and twenty-one (121) new rapid antigen positive results were reported from flu clinics on January 17th, 2022.

Seven (7) new PCR COVID-19 positive cases were reported from sixteen (16) samples collected on Tuesday January 18th, 2022, resulting in a positivity of 43.8%. Ninety-two (92) new rapid antigen positive results were reported from flu clinics on January 18th, 2022.

The current COVID-19 testing algorithm, based on the WHO recommendations appropriate for this phase on the current outbreak, reduces the number of RT-PCR tests conducted, relying more on rapid antigen and clinical diagnosis.

HOSPITAL ADMISSIONS

There are currently no patients admitted for COVID-19 at the Argyle Isolation Facility. Twenty-eight (28) patients are admitted to the COVID-19 ward at the Milton Cato Memorial Hospital, two (2) of whom are pregnant and one (1) of whom is younger than eighteen.

Six (6) of the admitted patients are vaccinated, two (2) patients are partially vaccinated, and twenty (20) patients are unvaccinated.

COVID-19 DEATHS

Two (2) new deaths were recorded over the reporting period.

A 74-year-old female tested positive for COVID-19 on January 6th, 2022, she was admitted to the isolation ward at the Milton Cato Memorial Hospital and died on the 18th of January of COVID-19 pneumonia.

continued on next page…

continued from previous page…

An 83-year-old male presented at the Milton Cato Memorial Hospital (MCMH), with symptoms typical of COVID-19, he tested positive for COVID-19 on January 19th, 2022, and later died at the MCMH. He was determined to have died of COVID-19 pneumonia.

Both patients were unvaccinated. Their deaths bring the death toll from COVID-19 to ninety (90).

COVID-19 SUMMARY

Fourteen (14) recoveries were noted over the reporting period. Eight hundred and seventy-three (873) cases are currently active and ninety (90) persons with COVID-19 have died. Six thousand six hundred and fifteen (6615) cases of COVID-19 and five thousand and six hundred and fifty-two (5652) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of the Omicron as the dominant variant in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone are strongly recommended. FIFTEEN (15) NEW CASES
TWO (2) DEATH

Two (2) new COVID-19 positive cases were reported on Wednesday, January 12th, 2022, bringing the total to eight (8) positives from twenty-six (26) samples, resulting in a positivity of 30.8%.

Fifteen (15) new COVID-19 positive cases were reported from twenty-five (25) samples collected on Thursday January 13th, 2022, resulting in a positivity of 60.0%. Sixty-eight (68) new rapid antigen positive results were reported from flu clinics on January 13th, 2022.

The current COVID-19 testing algorithm, based on the WHO recommendations appropriate for this phase of the current outbreak, reduces the number of RT-PCR tests conducted, relying more on rapid antigen testing and clinical diagnosis.

HOSPITAL ADMISSIONS

There are currently no patients admitted for COVID-19 at the Argyle Isolation Facility. Eighteen (18) patients are admitted to the COVID-19 ward at the Milton Cato Memorial Hospital, four (4) of whom are vaccinated, one (1) patient is partially vaccinated, and thirteen (13) patients are unvaccinated.

COVID-19 DEATHS

Two (2) new death was recorded on the January 14th, 2022. A 76-year-old male tested positive for COVID-19 on January 12th, 2021, he was admitted to the isolation ward at the Milton Cato Memorial Hospital and died on the 14th of January of COVID-19 pneumonia.

An 87-year-old male tested positive for COVID-19 on January 12th, 2021, he was admitted to the isolation ward at the Milton Cato Memorial Hospital and died on the 14th of January of COVID-19 pneumonia.

Both patients were unvaccinated. Their deaths bring the death toll from COVID-19 to eighty-seven (87).

COVID-19 SUMMARY

Twenty-seven (27) recoveries were noted over the reporting period. Nine hundred and ten (910) cases are currently active and eighty-seven (87) persons with COVID-19 have died. Six thousand five hundred and ninety-eight (6598) cases of COVID-19 and five thousand and six hundred and one (5601) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of the Omicron as the dominant variant in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone are strongly recommended. The public is reminded to always wear a properly fitting mask, get vaccinated and boosted and seek care early.

COVID-19 SUMMARY

Fourteen (14) recoveries were noted over the reporting period. Five hundred and ninety-six (596) cases are currently active and eighty-one (81) persons with COVID-19 have died. Five thousand eight hundred and twenty-eight (5828) cases of COVID-19 and five thousand and one hundred and fifty-one (5151) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of the Delta, Mu and Gamma variants in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone is strongly recommended. The correct and consistent use of masks, avoidance of crowds, physical distancing, proper hand sanitizing and immunization with available vaccines have all been proven to significantly reduce the risk of being infected, getting sick and or dying from the COVID-19 virus.

FIFTY-SIX (56) NEW COVID-19 CASES
ONE (1) DEATH

Fifty-two (52) new COVID-19 positive cases were reported from one hundred and seventy-eight (178) samples collected on Friday November 12th, 2021, resulting in a positivity of 29.2%. Fifteen (15) new rapid antigen positive results were reported from flu clinics on November 13th, 2021.

Three (3) new COVID-19 positive cases were reported from eighty-six (86) samples collected on Saturday November 13th, 2021, resulting in a positivity of 3.5%. Two (2) new rapid antigen positive results were reported from flu clinics on November 13th, 2021.

One (1) new COVID-19 positive cases were reported from seventeen (17) samples collected on Sunday November 14th, 2021, resulting in a positivity of 5.9%. No new rapid antigen positive results were reported from flu clinics on November 14th, 2021.

HOSPITAL ADMISSIONS

There are currently twelve (12) patients admitted for COVID-19 at the Argyle Isolation Facility. Eleven (11) patients are unvaccinated, and one (1) patient is partially vaccinated. Nineteen (19) patients are admitted to the COVID-19 wards at the Milton Cato Memorial Hospital. Seventeen (17) patients are unvaccinated, and two (2) patients are partially vaccinated.

COVID-19 DEATHS

A 72-year-old male who tested positive for COVID-19 on October 31st, 2021, died on November 13th, 2021, of COVID-19 pneumonia. The deceased was unvaccinated and had known underlying conditions. His death brings the death toll from COVID-19 to seventy-two (72).

continued on next page…

continued from previous page…

Three (3) new recoveries were noted over the reporting period. One thousand two hundred and seventy-three (1273) cases are currently active and seventy-two (72) persons with COVID-19 have died. Five thousand three hundred and twenty-six (5326) cases of COVID-19 and three thousand nine hundred and eighty-one (3981) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of the Delta, Mu and Gamma variants in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone is strongly recommended. The correct and consistent use of masks, avoidance of crowds, physical distancing, proper hand sanitizing and immunization with available vaccines have all been proven to significantly reduce the risk of being infected, getting sick and or dying from the COVID-19 virus.

TEN (10) NEW COVID-19 CASES

ONE (1) DEATH

Ten (10) new COVID-19 positive cases were reported from three hundred and eleven (311) samples collected on Wednesday October 27th, 2021, resulting in a positivity of 3.2%. Six (6) new rapid antigen positive results were reported from flu clinics on October 27th, 2021.

HOSPITAL ADMISSIONS

There are currently two (2) patients admitted for COVID-19 at the Argyle Isolation Facility. All are unvaccinated. Thirty-three (33) patients are admitted to the COVID-19 wards at the Milton Cato Memorial Hospital. Thirty (30) patients are unvaccinated, one (1) is partially vaccinated and two (2) patients are fully vaccinated.

COVID-19 DEATHS

A 55-year-old female who tested positive for COVID-19 on October 15th, 2021, died on October 27th, 2021. The deceased was unvaccinated. Her death brings the death toll from COVID-19 to sixty-six (66).

COVID-19 SUMMARY

Two (2) new recoveries were noted over the reporting period. One thousand seven hundred and ninety-eight (1798) cases are currently active and sixty-six (66) persons with COVID-19 have died. Four thousand and nine hundred and fifty-one (4951) cases of COVID-19 and three thousand and eighty-seven (3087) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of the Delta, Mu and Gamma variants in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone is strongly recommended. The correct and consistent use of masks, avoidance of crowds, physical distancing, proper hand sanitizing and immunization with available vaccines have all been proven to significantly reduce the risk of being infected, getting sick and or dying from the COVID-19 virus.

FIVE (5) DEATHS

One hundred and three (103) new COVID-19 positive cases were reported from seven hundred and seven (707) samples collected on Thursday October 7th, 2021, resulting in a positivity of 14.6%. Four (4) of the new cases were imported cases. Fourteen (14) rapid antigen positives cases were reported from flu clinics on October 7th, 2021.

An additional ninety-eight (98) new COVID-19 positive cases were reported from four hundred and eighty-one (481) samples collected on Friday October 8th, 2021, resulting in a positivity of 20.4%. One (1) of the new cases was detected during exit screening. Thirty-five (35) rapid antigen positive cases were reported from flu clinics on October 8th, 2021.

There are currently seven (7) patients admitted for COVID-19 at the Argyle Isolation Facility. All are unvaccinated. Nineteen (19) patients are admitted to the COVID-19 wards at the Milton Cato Memorial Hospital. Seventeen (17) patients are unvaccinated, and two (2) patients are partially vaccinated.

Five (5) additional COVID-19 deaths have been recorded. An 81-year-old female who tested positive for COVID-19 on September 26th, 2021, was admitted to the COVID ward at the Milton Cato Memorial Hospital and died on October 11th, 2021. A 72-year-old female who tested positive for COVID-19 on October 9th, 2021, was admitted to the COVID ward at the Milton Cato Memorial Hospital and died on October 10th, 2021. A 93-year-old female who tested positive for COVID-19 on October 11th, 2021, died at home on October 14th, 2021. A 64-year-old male who tested positive for COVID-19 on October 5th, 2021, was admitted to the COVID ward at the Milton

continued from previous page…

Cato Memorial Hospital and died on October 15th, 2021.A 57-year-old male who died on October 13th, 2021, tested positive for COVID-19 during postmortem testing. All the patients died of COVID-19 pneumonia, had underlying conditions, and were unvaccinated. Their deaths bring the death toll from COVID-19 to forty-seven (47). Two (2) other deaths in COVID-19 positive patients are currently under investigation.

Thirty-seven (37) new recoveries were noted over the reporting period. One thousand five hundred and thirty-one (1531) cases are currently active and forty-seven (47) persons with COVID-19 have died. Four thousand and four hundred and eighteen (4418) cases of COVID-19 and two thousand, eight hundred and forty (2840) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of the Delta, Mu and Gamma variants in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone is strongly recommended. The correct and consistent use of masks, avoidance of crowds, physical distancing, proper hand sanitizing and immunization with available vaccines have all been proven to significantly reduce the risk of being infected, getting sick and or dying from the COVID-19 virus.

Kingstown, St. Vincent and the Grenadines

ONE HUNDRED AND TWENTY-ONE (121) NEW COVID-19 CASES

FOUR (4) DEATHS

One hundred and twenty-one (121) new COVID-19 positive cases were reported from six hundred and fifty-six (656) samples collected on Wednesday October 6th, 2021, resulting in a positivity of 18.4%. One (1) of the new cases is an entry screen in a fully vaccinated passenger from St. Lucia. Four (4) cases were detected during exit screening. All other cases are contacts of known positive cases and persons seeking care. Sixteen (16) rapid antigen positive cases were reported from flu clinics.

There are currently nineteen (19) patients admitted for COVID-19 at the Argyle Isolation Facility. Sixteen (16) are unvaccinated, one (1) patient is partially vaccinated, and two (2) patients are fully vaccinated. Thirty-four (34) patients are admitted to the COVID-19 wards at the Milton Cato Memorial Hospital. Thirty-three (33) patients are unvaccinated and one (1) patient is partially vaccinated.

Four (4) additional COVID-19 deaths have been recorded. A 77-year-old male who tested positive for COVID-19 on October 3rd, 2021, died at home on October 10th, 2021, of COVID-19 infection. A 61-year-old female who tested positive for COVID-19 on October 2nd, was admitted to the COVID ward at the Milton Cato Memorial Hospital on October 5th and died on October 11th, 2021, of COVID-19 pneumonia. Another 61-year-old female who tested positive for COVID-19 on September 24th, 2021, died on October 11th, 2021, while admitted to the COVID-19 ward at the Milton Cato Memorial Hospital. A 79-year-old male patient tested positive for COVID-19 on October 3rd, 2021 and died on October 13th, 2021. All the patients were unvaccinated. Their deaths

continued on next page…

continued from previous page…

bring the death toll from COVID-19 to forty-two (42). Six (6) other deaths in COVID-19 positive patients are currently under investigation.

One hundred and ten (110) new recoveries were noted over the reporting period. One thousand three hundred and seventy-two (1372) cases are currently active and forty-two (42) persons with COVID-19 have died. Four thousand and two hundred and seventeen (4217) cases of COVID-19 and two thousand, eight hundred and three (2803) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

Kindly note that the number of active cases in release dated 10th October 2021, was 1365 and not 1286 as stated.

In view of the confirmed presence of the Delta, Mu and Gamma variants in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone is strongly recommended. The correct and consistent use of masks, avoidance of crowds, physical distancing, proper hand sanitizing and immunization with available vaccines have all been proven to significantly reduce the risk of being infected, getting sick and or dying from the COVID-19 virus.

Chair, Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

ONE HUNDRED AND THIRTY-ONE (131) NEW COVID-19 CASES

FIVE (5) DEATHS

One hundred and thirty-one new COVID-19 positive cases were reported from six hundred and fifty-eight (658) samples processed on Tuesday October 5th, 2021, resulting in a positivity of 20%. All cases are contacts of known positive cases and persons seeking care.

There are currently fifteen (15) patients admitted for COVID-19 at the Argyle Isolation Facility. Fourteen (14) are unvaccinated and one (1) patient is partially vaccinated. Thirty-six (36) patients are admitted to the COVID-19 wards at the Milton Cato Memorial Hospital. Thirty-four (34) patients are unvaccinated, one (1) patient is fully vaccinated, and one (1) patient is partially vaccinated.

Five (5) additional COVID-19 deaths have been recorded on Friday October 8th, and Saturday October 9th, 2021. A 94-year-old male who tested positive for COVID-19 on admission to the COVID ward at the Milton Cato Memorial Hospital died on October 8th, 2021, of COVID-19 pneumonia. The second patient is a 60-year-old female who tested positive for COVID-19 on September 27th, 2021, died on October 8th, 2021, while admitted to the COVID-19 ward at the Milton Cato Memorial Hospital. The third patient is a 34-year-old female who tested positive for COVID-19 on September 22, 2021 and died on October 8th, 2021. The fourth patient is a 70-year-old female with pre-existing conditions who tested positive for COVID-19 on admission to the COVID-19 ward at the Milton Cato Memorial Hospital on October 4th, 2021 and died of a COVID-19 pneumonia on October 8th, 2021. The fifth patient is a 77-year-old male who tested positive for COVID-19 on October 5th, 2021 and died at home with complications of COVID-19 on October

continued on next page…

continued from previous page…

9th, 2021. All the patients were unvaccinated. Their deaths bring the death toll from COVID-19 to thirty-eight (38).

One hundred and sixty-one (161) new recoveries were noted over the reporting period. One thousand two hundred and eighty-six (1286) cases are currently active and thirty-eight (38) persons with COVID-19 have died. Four thousand and ninety-six (4096) cases of COVID-19 and two thousand, six hundred and ninety-three (2693) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

The established public health interventions of detection, testing and quarantining or isolation continue aimed at containing and suppressing this current major outbreak. The increased testing associated with these public health interventions coupled with the large number of requests for exit screens from travelers leaving St. Vincent and the Grenadines has resulted in a significant backlog of samples awaiting PCR processing at the Molecular Lab Unit (MLU). This back log, estimated to be 800 samples, should be cleared in 48 hours.

The strict enforcement of and compliance with all protocols and recommendations are required by everyone if the current outbreak, powered by the highly contagious and deadlier Delta and Gamma variants of the (SARS-CoV-2) virus which causes COVID-19, is to be contained. The correct and consistent use of masks, avoidance of crowds, physical distancing, proper hand sanitizing and immunization with available vaccines have all been proven to significantly reduce the risk of being infected, getting sick and or dying from the COVID-19 virus.

EIGHTY-FIVE (85) NEW COVID-19 CASES
TWO (2) DEATHS

Eighty-five (85) new COVID-19 positive cases were reported from three hundred and ninety-seven (397) samples processed on Tuesday September 28th, 2021, resulting in a positivity rate of 21.4%. All cases are contacts of known positive cases and persons seeking care. Forty-nine (49) rapid antigen positive results were reported for Tuesday September 28th, 2021.

Two persons died on September 29th, 2021, of COVID-19 pneumonia. One is a 62-year-old male who tested positive for COVID-19 on September 14th, was admitted to the Argyle Isolation Facility on September 20th, and later transferred to the COVID-19 ward at the Milton Cato Memorial Hospital. The second patient is a 60-year-old male who tested positive for COVID-19 on September 25th, 2021, and was admitted to the COVID-19 ward at Milton Cato Memorial Hospital. Both of the deceased had underlying conditions and were unvaccinated. Their deaths bring the death toll from COVID-19 to twenty-one (21).

There are currently twenty-two (22) patients admitted for COVID-19 at the Argyle Isolation Facility. Twenty-one (21) are unvaccinated and one (1) patient is fully vaccinated. Fourteen (14) patients are admitted to the COVID-19 ward at the Milton Cato Memorial Hospital. Thirteen (13) are unvaccinated and one (1) patient is partially vaccinated.

Sixteen (16) new recoveries were noted over the reporting period. One thousand and fifty-one (1051) cases are currently active and twenty-one (21) persons with COVID-19 have died. Three thousand five hundred and eight (3508) cases of COVID-19 and two thousand, four hundred and thirty-six (2436) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of the Delta,[1]Mu and Gamma variants in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone is strongly recommended. The correct and consistent use of masks, avoidance of crowds, physical distancing, proper hand sanitizing and immunization with available vaccines have all been proven to significantly reduce the risk of being infected, getting sick and or dying from the COVID-19 virus.

FIFTY-FOUR (54) NEW COVID-19 CASES

Fifty-four (54) new COVID-19 positive cases were reported from three hundred and one (301) samples processed on Monday September 27th, 2021, resulting in a positivity rate of 17.9%. Two (2) cases were detected on exit screen. All other cases are contacts of known positive cases and persons seeking care. Twenty-four (24) rapid antigen positive results were reported for Monday September 27th, 2021.

There are currently twenty-one (21) patients admitted for COVID-19 at the Argyle Isolation Facility. Twenty (20) are unvaccinated and one (1) patient is fully vaccinated. Fourteen (14) patients are admitted to the COVID-19 ward at the Milton Cato Memorial Hospital. Eight (8) are unvaccinated, one (1) patient is partially vaccinated and the vaccination status of five (5) patients is awaiting confirmation.

Thirteen (13) new recoveries were noted over the reporting period. Nine hundred and eighty-four (984) cases are currently active and nineteen (19) persons with COVID-19 have died. Three thousand four hundred and twenty-three (3423) cases of COVID-19 and two thousand, four hundred and twenty (2420) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of the Delta, Mu and Gamma variants in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone is strongly recommended. The correct and consistent use of masks, avoidance of crowds, physical distancing, proper hand sanitizing and immunization with available vaccines have all been proven to significantly reduce the risk of being infected, getting sick and or dying from the COVID-19 virus.

Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

TEN (10) NEW COVID-19 CASES

ONE (1) DEATH

Ten (10) new COVID-19 positive cases were reported from one hundred and forty-one (141) samples processed on Sunday September 26th, 2021, resulting in a positivity rate of 7.1%. Two (2) cases were detected on exit screen. All other cases are contacts of known positive cases and persons seeking care. Eight (8) rapid antigen positive results were reported for Sunday September 26th, 2021.

A 48-year-old female died on September 28th, 2021, of COVID-19 pneumonia. The patient tested positive for COVID-19 on September 26th, 2021, and was admitted to the COVID-19 ward at the Milton Cato Memorial Hospital. The deceased had an underlying condition and was unvaccinated. Her death brings the death toll from COVID-19 to nineteen (19).

There are currently nineteen (19) patients admitted for COVID-19 at the Argyle Isolation Facility. Eighteen (18) are unvaccinated and one (1) patient is partially vaccinated. Fourteen (14) patients are admitted to the COVID-19 ward at the Milton Cato Memorial Hospital. Thirteen (13) are unvaccinated and one (1) patient is partially vaccinated.

Nineteen (19) new recoveries were noted over the reporting period. Nine hundred and forty-three (943) cases are currently active and nineteen (19) persons with COVID-19 have died. Three thousand three hundred and sixty-nine (3369) cases of COVID-19 and two thousand, four hundred and seven (2407) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

continued on next page…

…continued from previous page

The Ministry of Health, Wellness and the Environment was informed by CARPHA of the COVID-19 sequencing results of four (4) positive samples collected from patient in St. Vincent and the Grenadines on August 30th and 31st, 2021. The samples were received at the CARPHA lab on September 2nd and 4th, 2021 and sent to the COVID19 IMPACT Project lab on September 8th and 10th, 2021. The COVID19 IMPACT project lab reported on September 25, 2021, to CARPHA that the Gamma variant of concern (VOC) – P.1 was detected in two samples and the Mu variant of interest (VOI) – B.1.621.1 was detected in two samples. The samples are from Vincentian residents who tested positive for SARS-CoV-2 on August 30th and 31st, 2021. These adults have not been vaccinated against COVID-19. These cases were isolated and have since tested negative for COVID-19.

In view of the confirmed presence of the Delta, Mu and Gamma variants in the community and the significant increase in the number of new infections, transmission, severe COVID-19 disease and deaths, strict enforcement and compliance with all protocols and recommendations by everyone is strongly recommended. The correct and consistent use of masks, avoidance of crowds, physical distancing, proper hand sanitizing and immunization with available vaccines have all been proven to significantly reduce the risk of being infected, getting sick and or dying from the COVID-19 virus.

PRESS RELEASE
FOR IMMEDIATE RELEASE

September 13th, 2021

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

EIGHT (8) NEW COVID-19 CASES
ONE (1) DEATH

Eight (8) new COVID-19 positive cases were reported from one hundred and twenty (120) samples processed on Sunday September 12th, 2021, resulting in a positivity rate of 6.7%.

A 41-year-old female who died suddenly at home on September 9th, 2021, was found to have succumbed to COVID-19. She was not previously known to be COVID-19 positive. She had no known underlying conditions and was unvaccinated. Her death brings the death toll from COVID-19 to thirteen (13).

Two (2) new recoveries were noted over the reporting period. One hundred and eighty-three (183) cases are currently active and thirteen (13) persons with COVID-19 have died. Two thousand five hundred and twenty-one (2521) cases of COVID-19 and two thousand, three hundred and twenty-five (2325) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the confirmed presence of the Delta, Mu and Gamma variants in the community and the significant increase in the number of new infections, transmission and severe COVID-19 disease, strict enforcement and compliance with all protocols and recommendations by everyone is strongly recommended. The correct and consistent use of masks, avoidance of crowds, physical distancing, proper hand sanitizing and immunization with available vaccines have all been proven to significantly reduce the risk of being infected, getting sick and or dying from the COVID-19 virus.

ONE LOCAL GAMMA VARIANT CASE

&

FORTY-ONE (41) NEW COVID-19 CASES

The Ministry of Health, Wellness and the Environment was informed by CARPHA on September 12, 2021, of the COVID-19 sequencing results of a positive sample collected from a patient in St. Vincent and the Grenadines on August 14, 2021. The sample was received at the CARPHA lab on August 20, 2021 and sent to the COVID19 IMPACT Project lab on August 24, 2021. The COVID19 IMPACT project lab reported on September 11, 2021, to CARPHA that the Gamma variant of concern (VOC) – P.1 was detected in one sample.

The sample was from a Vincentian resident who tested positive for SARS-CoV-2 while seeking care on August 14, 2021. This adult has not been vaccinated against COVID-19. Contact tracing of this Vincentian resident detected no other COVID-19 positive cases. This case was isolated and has since tested negative for COVID-19.

Forty-one (41) new COVID-19 positive cases were reported from three hundred and eleven (311) samples processed on Friday September 10th, 2021, resulting in a positivity rate of 13.2%.

No new recoveries were noted over the reporting period. One hundred and fifty-two (152) cases are currently active and twelve (12) persons with COVID-19 have died. Two thousand four

TWENTY-FIVE (25) NEW COVID-19 CASES & ONE LOCAL DELTA CASE

The Ministry of Health, Wellness and the Environment was informed by CARPHA on September 10, 2021, of the COVID-19 sequencing results of positive samples collected from patients in St. Vincent and the Grenadines on August 14, 2021. These samples were received at the CARPHA lab on August 19, 2021 and sent to the COVID19 IMPACT Project lab on August 20, 2021. The COVID19 IMPACT project lab reported on September 10, 2021, to CARPHA that the Delta variant of concern (VOC) – B.1.617.2 was detected in two samples.

One of the two samples determined to be the Delta variant, was a follow up test of a traveler previously identified as having said variant after entry screening at the AIA on August 12, 2021 and subsequent testing at the COVID 19 IMPACT Project lab. The other sample was from a Vincentian resident who tested positive for SARS-CoV-2 on exit screening on August 14, 2021. This adult had already received one (1) dose of a COVID-19 vaccine. Contact tracing of this Vincentian resident detected no other COVID-19 positive cases. Both persons were isolated and have since tested negative for COVID-19.

Twenty-five (25) new COVID-19 positive cases were reported from three hundred and ninety-six (396) samples processed on Thursday September 9th, 2021, resulting in a positivity rate of 6.3%.

continued on next page…

…continued from previous page

hundred and forty-six (2446) cases of COVID-19 and two thousand, three hundred and twenty-three (2323) recoveries have been recorded in St. Vincent and The Grenadines since March 2020.

In view of the confirmed presence of the Delta and Mu variants in the community and the significant increase in the number of new infections, transmission and severe COVID-19 disease, strict enforcement and compliance with all protocols and recommendations by everyone is strongly recommended. THIRTY (30) NEW COVID-19 CASES

Thirty (30) new COVID-19 positive cases were reported from three hundred and twenty-two (322) samples processed on Wednesday September 8th, 2021, resulting in a positivity rate of 9.3%.

Seven (7) new recoveries were noted over the reporting period. Eighty-eight (88) cases are currently active and twelve (12) persons with COVID-19 have died. Two thousand four hundred and twenty-one (2421) cases of COVID-19 and two thousand, three hundred and twenty-one (2321) recoveries have been recorded in St. Vincent and The Grenadines since March 2020.

In view of the confirmed presence of the Mu variant of interest in the community and the increased risk of infection and subsequent transmission of COVID-19 posed by the growing incidence of variants of concern in persons entering St. Vincent and the Grenadines, strict compliance with all protocols and recommendations is strongly recommended. These include the effective use of masks, physical distancing, hand sanitizing and immunization with available vaccines.

Kingstown, St. Vincent and the Grenadines

MU VARIANT

&

FOUR (4) NEW COVID-19 CASES

The World Health Organization (WHO) on August 30th, 2021, named the variant B.1.621 - Mu, a variant of interest. A variant of interest (VOI) is one that has genetic differences to the other known variants and is causing infections in multiple countries, and therefore ***might*** present a particular threat to public health. A VOI is not a variant of concern (VOC), which is a variant that has been proven to be either more transmissible, cause severe disease or is able to escape the immune response making it more dangerous and so more consequential.

Mu is the fifth "variant of interest" to be monitored by WHO since March 2020. The WHO weekly COVID-19 bulletin states that this variant of interest "has a constellation of mutations" that may make it less susceptible to vaccines and immunity from natural infections. Research and further monitoring will be done to better understand the characteristics of this variant of interest.

On review of sequencing results for samples sent from St. Vincent and the Grenadines to the COVID-19 IMPACT Project Lab through the Caribbean Public Health Agency (CARPHA), five (5) cases of the Mu variant were detected between July 19th, 2021, and August 9th, 2021. All cases were detected within the community as contacts of other positive cases and from persons seeking healthcare.

Four (4) new cases were reported from thirty-six (36) samples processed on Monday September 6th, 2021, resulting in a positivity rate of 11.1%.

continued on next page…

…continued from previous page

Five (5) new recoveries were noted over the reporting period. Sixty-five (65) cases are currently active and twelve (12) persons with COVID-19 have died. Two thousand three hundred and eighty-nine (2389) cases of COVID-19 and two thousand, three hundred and twelve (2312) recoveries have been recorded in St. Vincent and The Grenadines since March 2020.

In view of the confirmed presence of the Mu variant of interest in the community and the increased risk of infection and subsequent transmission of COVID-19 posed by the growing incidence of variants of concern in persons entering St. Vincent and the Grenadines, strict compliance with all protocols and recommendations is strongly recommended. These include the effective use of masks, physical distancing, hand sanitizing and immunization with available vaccines.

FIVE (5) NEW COVID-19 CASES
TWO NEW IMPORTED CASES OF DELTA VARIANT

The Ministry of Health, Wellness and the Environment was informed this morning August 27, 2021 by CARPHA of the COVID-19 sequencing results of positive samples collected from patients in St. Vincent and the Grenadines on August 12, 2021, received at the CARPHA lab on August 17, 2021 and sent to the COVID19 IMPACT project lab on August 18, 2021. The COVID19 IMPACT project lab reported on August 26, 2021 to CARPHA that the delta variant of concern (VOC) – B.1.617.2 was detected in two samples.

One sample was collected during entry screening at the AIA from a fully vaccinated traveler who arrived from England with a negative PCR result on August 12, 2021. The Molecular Lab Unit (MLU) of the Ministry of Health, Wellness and the Environment subsequently reported on August 12, 2021 that the traveler had tested positive. The other sample was from an vaccinated traveler who arrived on August 9, 2021 and tested positive on August 12, 2021 while in quarantine. Both travelers then transitioned to approved isolation accommodations, and have since tested negative for COVID-19.

Routine contact tracing detected six other COVID-19 positive cases associated with these travelers. All of these positive cases have since been cleared by negative SARS-CoV-2 (COVID-19) PCR tests.

continued on next page…

…continued from previous page

Three (3) new COVID-19 positive cases were reported from two hundred and nineteen (219) samples processed on Wednesday August 25th, 2021, resulting in a positivity rate of 1.4%. Two (2) new COVID-19 positive cases were reported from two hundred and ninety-three (293) samples processed on Thursday August 26th, 2021, resulting in a positivity rate of 0.7%.

Sixteen (16) new recoveries were noted over the reporting period. Eighteen (18) cases are currently active and twelve (12) persons with COVID-19 have died. Two thousand three hundred and thirty-one (2331) cases of COVID-19 and two thousand, three hundred and one (2301) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

In view of the increased risk of infection and subsequent transmission of COVID-19 posed by the growing incidence of variants of concern in persons entering St. Vincent and the Grenadines, strict compliance with all protocols and recommendations is strongly recommended. These include the effective use of masks, physical distancing, hand sanitizing and immunization with available vaccines.

THE DETECTION OF A VARIANT OF CONCERN IN ST. VINCENT AND THE GRENADINES

The Ministry of Health, Wellness and the Environment was informed this morning by CARPHA of the COVID-19 sequencing results of samples received at CARPHA on July 27th, 2021. One sample detected a variant of concern (VOC) – B.1.617.2 - Delta variant.

This sample was collected during entry screening at the AIA from a fully vaccinated traveler who arrived from England with a negative PCR result on July 21, 2021. The Molecular Lab Unit (MLU) of the Ministry of Health, Wellness and the Environment reported on July 22, 2021 that the traveler had tested positive. The adult then transitioned from 48 hours hotel quarantine to approved isolation accommodation, and has since tested negative for COVID-19.

Continued on next page…

The adult remained asymptomatic throughout this period of isolation and never required admission for care.

Routine contact tracing detected two other COVID-19 positive cases associated with this traveler. These positive cases are unvaccinated travelers to SVG and displayed symptoms of COVID-19. One of these two persons has since tested negative for COVID-19. They all remain in strict isolation.

The Delta variant is described by the CDC as

- **WHO Label: Delta**
- **First Identified**: India
- **Attributes**:
- Increased transmissibility
- Reduction in neutralization by post-vaccination sera (reduced effectiveness of vaccines).

The delta variant currently accounts for 93% of new COVID-19 cases in the USA and the associated illness and deaths.

In view of the detection of this highly contagious variant of the COVID-19 causing virus in St. Vincent and the Grenadines, the Ministry of Health, Wellness and the Environment asks the public to increase their compliance with the basic public health measures of correct mask use, physical distancing and hand sanitizing. The Ministry once again urges all eligible members of the Vincentian public to get vaccinated against the COVID-19 virus now.

ONE (1) NEW COVID-19 CASE

One (1) new COVID-19 positive case was reported from three hundred and nineteen (319) samples processed on Saturday July 24th, 2021, resulting in a positivity rate of 0.3%. The new case is linked to an emergency shelter. No new COVID-19 positive cases were reported from ninety three (93) samples processed on Sunday July 25th, 2021.

Three (3) new recoveries were noted over the reporting period. Sixty-six (66) cases are currently active and twelve (12) persons with COVID-19 have died. Two thousand two hundred and eighty (2280) cases of COVID-19 and two thousand, two hundred and two (2202) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

Persons who persist in incorrect or no mask use, remain unvaccinated and participate in mass gatherings will continue to be at risk for being infected and spreading COVID-19. To reduce the spread of COVID-19 in St. Vincent and the Grenadines, compliance with the protocols including the effective use of masks, physical distancing, and the evidence-based recommendations to be vaccinated with the available vaccines is strongly recommended.

PRESS RELEASE
FOR IMMEDIATE RELEASE

June 30th, 2021

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

TWO (2) NEW COVID-19 CASES

Two (2) new COVID-19 positive cases were reported from one hundred and fifty-one (151) samples processed on Tuesday June 29th, 2021, resulting in a positivity rate of 1.3%.

Four (4) new recoveries were noted over the reporting period. Two hundred and nine (209) cases are currently active and twelve (12) persons with COVID-19 have died. Two thousand two hundred and twenty-seven (2227) cases of COVID-19 and two thousand and six (2006) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

Persons who persist in incorrect or no mask use, remain unvaccinated and participate in mass gatherings will continue to be at risk for being infected and spreading COVID-19. To reduce the spread of COVID-19 in St. Vincent and the Grenadines, compliance with the protocols including the effective use of masks, physical distancing, and the evidence-based recommendations to be vaccinated with the available vaccines is strongly recommended.

PRESS RELEASE
FOR IMMEDIATE RELEASE

June 11th, 2021

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

NINETEEN (19) NEW COVID-19 CASES IN BEQUIA

Nineteen (19) new cases of COVID-19 were confirmed in persons residing in Bequia from tests conducted on June 9, 2021. Extensive contact tracing is ongoing and it is anticipated that more cases will be detected. These cases are part of thirty-one (31) cases reported for June 9 and are strongly suggestive of a second wave outbreak of COVID-19 in St. Vincent and the Grenadines.

The associated quarantine and isolation measures implemented to contain the further spread of COVID-19 in Bequia have required the closure of BRAGSA Bequia, the Local Government Office, Paget Farm Primary School, Bequia Government Primary School, Bequia SDA Secondary School, Bequia Community High School, Lower Bay Primary and some preschools.

The Ministry of Health, Wellness and the Environment is providing additional support to the health care team on Bequia to ensure that this outbreak is quickly contained. The full cooperation of the entire community of Bequia and the remainder of St. Vincent and the Grenadines is critical if this second wave, which is affecting the entire country is to be rapidly and efficiently curtailed. Compliance with all existing protocols including mandatory mask use in public spaces and private spaces to which the public has access, restrictions of mass gatherings to ten persons (10) indoors and twenty (20) outdoors, no indoor dining and restricted occupancy in public vessels and vehicles is critical.

The effectiveness and relative safety of available COVID-19 vaccinations to reduce the spread of the SARS-CoV-2 virus has been proven throughout the world. Residents of St. Vincent and the Grenadines aged 18 years and older are strongly encouraged to protect themselves, their families and livelihoods by becoming vaccinated as a matter of urgency. COVID-19 vaccines approved by the World Health Organization are still available at all government health clinics free of charge.

The Health Services Subcommittee of NEMO will continue to work with the public, the Royal St Vincent and The Grenadines Police Force (RSVGPF), other ministries and civil society to contain the spread of COVID-19 in St Vincent and the Grenadines.

Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

THIRTY-ONE (31) NEW COVID-19 CASES

Thirty-one (31) new COVID-19 positive cases were reported from two hundred and twenty-one (221) samples processed on Wednesday June 9th, 2021, resulting in a positivity rate of 14.0%. Cases include persons who work in environments with low vaccination coverage and those who attended various events known to be high risk for spread.

Twenty-seven (27) new recoveries were noted over the reporting period. Two hundred and thirty-one (231) cases are currently active and twelve (12) persons with COVID-19 have died. Two thousand one hundred and thirty-two (2132) cases of COVID-19 and eighteen hundred and eighty-nine (1889) recoveries have been recorded in St. Vincent and the Grenadines since March 2020.

Persons who persist in incorrect or no mask use, remain unvaccinated and participate in mass gatherings will continue to be at risk for being infected and spreading COVID-19, as is happening now. The public is urged to continue to use masks, sanitize, physically distance and get vaccinated to reduce the spread of COVID-19 in St. Vincent and the Grenadines.

PRESS RELEASE

FOR IMMEDIATE RELEASE

April 1st , 2021

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

EASTER 2021 COVID-19 ADVISORY

In view of the ongoing community spread of COVID-19 in St. Vincent and the Grenadines and in compliance with the existing Public Health Rules 2021, the Ministry of Health, Wellness and the Environment reminds the public of the need to observe the existing regulations relative to physical distancing, the mandatory use of masks and sanitizing. The following advice applies for the Easter Weekend, Friday, April 2nd, 2021 to Monday, April 5th, 2021:

1. Church Services – Good Friday, Saturday Services and Easter Sunday:
    a. Limit congregations to 1/3 capacity of the house of worship
    b. Mandatory mask use
    c. Physical spacing
    d. Sanitization
    e. Registration of congregants.
2. Mass gatherings – excluding churches:
    a. No indoor dining
    b. No more than 10 persons for indoor gatherings
    c. No more than 20 persons for outdoor gatherings.
3. Mandatory mask use in public spaces and private spaces to which the public has access.
4. Persons operating public transportation vehicles:
    a. Limit passengers to ½ the licensed number of passengers
    b. Mandatory mask use by occupants
    c. Sanitization of vehicles.

There should therefore be no social gatherings including river cooks, limes, boat rides, picnics or parties during the Easter weekend.

The Victoria Park Vaccination site in Kingstown will be open on Saturday April 3rd from 9 am to 12 pm. Additionally, the Stubbs and Buccament Polyclinics will be open on Saturday April 3rd , Sunday 4th and Monday 5th from 8am to 12 pm.

There will however be no vaccine caravans during the Easter weekend as the COVID-19 Vaccination teams will observe a period of rest, rejuvenation and reflection from Good Friday to Easter Monday.

TWO (2) DEATHS, FOUR (4) NEW CASES

EIGHT (8) RECOVERIES

St. Vincent and the Grenadines today reported two (2) new COVID-19 deaths. The first is a sixty (60) year old female resident of Sandy Bay who tested positive for COVID-19 on February 6th and died at home after complaining of abdominal pain on February 8th, 2021. On Monday February 22nd a postmortem was deferred and this death has classified as caused by COVID-19.

The second death reported is of a forty-three (43) year old male who was admitted to the Milton Cato Memorial Hospital on February 10th and found to be COVID-19 positive. The patient, who had a history of hypertension, became progressively ill and was placed on a ventilator for breathing support. Despite this intervention, the patient continued to deteriorate and died at 9:40 am on Thursday 25, 2021.

A total of four (4) new COVID-19 cases were reported. Three (3) were RT-PCR results for patients seen on Wednesday, February 24th and one (1) for Thursday February 25th. A total of 209 samples were processed for February 24th , yielding a total of five (5) positives and a calculated positivity rate of 2.4% for Wednesday, February 24th.

Eight (8) persons were cleared bringing the number of total recoveries to nine hundred and thirteen (913). Six hundred and nine (609) cases remain active and eight (8) persons with COVID-19 have died. One thousand, five hundred and thirty (1530) cases of COVID-19 have been reported in St. Vincent and the Grenadines since March 2020.

SIXTEEN (16) NEW CASES

TWO (2) DEATHS AND THIRY-SIX (36) RECOVERIES

St. Vincent and the Grenadines today confirmed sixteen (16) new COVID-19 cases from swabs taken between February 2nd and 9th. These cases were detected during entry and exit screening, contact tracing and testing of persons with flu symptoms. There are now one thousand, one hundred and eighty-nine (1189) local cases of COVID-19.

Two (2) additional persons have died from complications of COVID-19. An 87-year-old hypertensive man was admitted on February 6, 2021 in an unresponsive state and tested positive for COVID-19. He remained unresponsive and died on February 8, 2021 from a stroke and pneumonia related to COVID-19. The second person is a 54-year-old female with hypertension and uncontrolled diabetes who was admitted in the early hours of February 9, 2021 with severe respiratory distress, tested positive for COVID-19 and died at 2 am.

Thirty-six (36) persons have been cleared bringing the number of total recoveries to four hundred and fifty-four (454). Eight hundred and eighty (880) cases remain active and six (6) persons with COVID-19 have died. One thousand, three hundred and twenty-four (1340) cases of COVID-19 have been reported in St. Vincent and the Grenadines since March 2020.

Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

STRENGTHENING OF THE ENFORCEMENT OF PUBLIC HEALTH MEASURES

St. Vincent and the Grenadines on February 4, 2021 reported one hundred and three (103) new COVID-19 cases from samples collected between January 21st and February 3rd. These new cases were detected through the testing of contacts of known positives, routine screening and testing of persons with flu symptoms. Many of the cases are clustered in families and small social groups including patrons of gambling sheds and rum shops. There are now one thousand and twenty-one (1021) local cases of COVID-19. Four hundred and ninety-four (494) of these cases are contacts of known positives, while one hundred and seventy-seven (177) are persons who presented with flu-like symptoms and tested positive for COVID-19. Forty-seven (47) persons have been found to be positive for COVID-19 during exit screening. The laboratory forms of three hundred and three (303) persons who tested positive had no record of the reason for testing and may have been part of random screening. While there are many new clusters of cases, this pattern of transmission is consistent with community spread.

A review of the COVID-19 cases since December 16, 2020 revealed that the positivity rate for COVID-19 testing dramatically increased from 6.6% on January 11th to 15.7% on January 21st, 16.6% on January 28th and 15.3% on January 30th. Testing on samples taken on February 1st and 2nd so far gives incidence rates of 2.7% and 3.2%. Given the incubation period of 14 days, increases in these rates due to spread which occurred around January 28 are anticipated in the coming days.

continued on following page…

A significant proportion of the cases recorded from testing done between January 20th and 28th came from the Georgetown health district, specifically Sandy Bay, and the Chateaubelair health district.

In view of the increased risk of spread of COVID-19 in indoor locations where masks use and physical distancing are reduced, the following additional measures under the Public Health Act of 2020 have been recommended and statutory rules and orders are currently being drafted for a ticketing system in support of their enforcement:

1. The mandatory use of masks in all public transportation vehicles.
2. All public vehicles may only transport a maximum of half their permitted number of passengers. (A 20-seater van will be allowed to transport 10 persons inclusive of the driver and conductor.)
3. No indoor dining in eating establishments. Only take away service will be allowed for indoor restaurants. Outdoor dinning with adequate spacing is permitted.
4. Enforcement of all components of the mass gathering protocol with particular emphasis on indoor gatherings at places of entertainment such as bars, gambling sheds and rum shops.
5. Mandatory masks in all public establishments and private establishments to which the public has access.

These measures will commence with the publication of the Statutory Rules and Orders specific to the ticketing system to be implemented. This publication is anticipated to occur between today Friday, February 5 and Monday, February 8, 2021. These measures will be in place for four weeks in the first instance.

ONE HUNDRED AND THREE (103) NEW CASES

THIRTY-NINE (39) RECOVERIES

St. Vincent and the Grenadines today confirmed one hundred and three (103) new COVID-19 cases from samples collected between January 21st and February 3rd . All of the new cases were detected during contact tracing, routine screening and testing of persons with flu symptoms. Many of the cases are clustered in families and small social groups including patrons of gambling sheds and rum shops. There are now one thousand and twenty-one (1021) local cases of COVID-19.

Thirty-nine (39) persons have been cleared bringing the number of total recoveries to three hundred and seventy-seven (377). Seven hundred and ninety (790) cases remain active and three (3) persons with COVID-19 have died. One thousand, one hundred and seventy (1170) cases of COVID-19 have been reported in St. Vincent and the Grenadines since March 2020. All positive cases will remain isolated until cleared. All close contacts of positive cases currently in quarantine, should contact the flu clinic in their district to arrange testing for clearance.

All residents of and visitors to St. Vincent and the Grenadines are reminded of the importance of consistently wearing facial coverings, practicing physical distancing and frequent hand washing, or sanitization, to reduce the likelihood of being infected with the virus which causes COVID-19.

EIGHT (8) NEW CASES & ONE (1) DEATH

SIXTY-THREE (63) RECOVERIES

St. Vincent and the Grenadines today confirmed eight (8) new COVID-19 cases from samples collected between January 17th and February 2nd . All of the new cases were detected during contact tracing and testing of persons with flu symptoms. There are now nine hundred and eighteen (918) local cases of COVID-19, many of whom are linked as contacts of known positives.

A 76 year old female is the third (3rd) person to die from complications of COVID-19 in St. Vincent and the Grenadines. The patient, who was admitted to the Milton Cato Memorial Hospital on January 31, 2021, had multiple pre-exiting conditions and succumbed to multiorgan failure on February 3, 2021.

Sixty-three (63) additional persons have recovered bringing the number of total recoveries to three hundred and thirty-eight (338). Seven hundred and twenty-six (726) cases remain active and three (3) persons with COVID-19 have died. One thousand and sixty-seven (1067) cases of COVID-19 have been reported in St. Vincent and the Grenadines since March 2020. All positive cases will remain isolated until cleared. All close contacts of positive cases currently in quarantine, should contact the flu clinic in their district to arrange testing for clearance.

Kingstown, St. Vincent and the Grenadines

SVG GETS ALLOCATION OF COVID VACCINE

St. Vincent and the Grenadines, Barbados and several Eastern Caribbean Countries who signed agreements with the COVAX Facility have been informed of the indicative allocation of COVID-19 vaccines. St. Vincent and The Grenadines' allocation is for 45,600 indicative doses of AstraZeneca.

This means that St. Vincent and the Grenadines can expect to receive the COVID-19 vaccine(s) over the coming few weeks. The vaccines are the first of the assigned doses to satisfy COVAX's agreement with this country.

The COVAX facility has advised that vaccines will be delivered effective mid to late February with 357, 600 doses of the AstraZeneca AZD1222 vaccine, to Barbados, Antigua and Barbuda, Dominica, Grenada, St. Kitts and Nevis, St. Lucia, and St. Vincent and the Grenadines. The allocation was determined by the World Health Organization (WHO) panel of experts and GAVI taking a big step towards equal access to COVID-19 vaccines.

The main objective of this allocation is for countries to begin vaccinating their priority populations as quickly as possible.

Minister of Health St Clair Prince says this development is: "a significant boost in our fight against the disease and the safety of the population, a transformative complement to the measures already in place in our COVID-19 response."

Chief Medical Officer Dr Simone Keizer-Beache notes that: "The allocation of 45,600 AstraZeneca COVID vaccines to SVG with 25% being available in the first quarter, is an extremely important development in our battle to control the spread of COVID-19 in SVG and to return to some level of normalcy.

"Our strategy was always aimed at keeping the virus out of SVG for as long possible until a vaccine became available. We will now move to rapidly but safely vaccinate sufficient of our population to allow for the protection of all of the population," Keizer Beache adds.

The CMO explains that: "Even as we await the actual receipt of these vaccines from Covax, we are cognizant of the need to procure additional vaccines to adequately implement phase I of our national vaccination introduction and deployment plan."

A release from PAHO states that the COVAX Facility has managed to secure significant doses of vaccines from various manufacturers. In addition, these are authorized or very close to being authorized by WHO Emergency Use Listing (EUL). Because EUL has yet to be granted by WHO in respect of this vaccine, the Facility has for now only provided an indicative number of doses, covering the next two quarters.

The next steps to access the allocation include countries having the necessary indemnity and liability frameworks, including the required legislative framework in place where necessary, in order to complete an agreement directly with AstraZeneca.

PRESS RELEASE

FOR IMMEDIATE RELEASE

January 24, 2021

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

EIGHT (8) NEW CASES

St. Vincent and the Grenadines today confirmed eight (8) new COVID-19 cases. All of the cases are nationals detected during contact tracing. There are now six hundred and five (605) local cases of COVID-19, the majority of whom are linked to various clusters.

One hundred and forty-seven (147) persons have recovered, five hundred and ninety-seven (597) cases remain active and two (2) persons with COVID-19 have died. Seven hundred and forty-six (746) cases of COVID-19 have been reported in St. Vincent and the Grenadines since March 2020. All positive cases will remain isolated until cleared. All close contacts of positive cases, should contact the flu clinic in their district to arrange testing. These close or primary contacts must remain in their place of quarantine until receipt of their results.

The public is encouraged to comply with the mass gatherings protocol which restricts all indoor mass gatherings, including funerals and house parties, to ten (10) persons, and outdoor mass gatherings which include limes, beach and river picnics, to twenty (20) persons.

All residents of and visitors to St. Vincent and the Grenadines are reminded of the importance of consistently wearing facial coverings to protect themselves from being infected with the virus which causes COVID-19. Where prolonged very close contact is unavoidable, such as when having a dental procedure or ophthalmological assessment, the provider of the service should wear goggles or a face shield in addition to a face mask.

EIGHTEEN (18) NEW CASES

St. Vincent and the Grenadines today confirmed eighteen (18) new COVID-19 cases. All of the cases are nationals detected during exit screening, contact tracing, testing at flu clinics and targeted screening. There are now five hundred and ninety-seven (597) local cases of COVID-19, the majority of whom are linked to various clusters.

One hundred and thirty-four (134) persons have recovered, six hundred and two (602) cases remain active and two (2) persons with COVID-19 have died. Seven hundred and thirty-eight (738) cases of COVID-19 have been reported in St. Vincent and the Grenadines since March 2020. All positive cases will remain isolated until cleared. All close contacts of positive cases, must remain in their place of quarantine until receipt of their results.

The public is asked to comply with the mass gatherings protocol which restricts all indoor mass gatherings, including funerals and house parties, to ten (10) persons, and outdoor mass gatherings to twenty (20) persons. Outdoor gatherings include open air crusades, limes, outdoor fetes, gatherings around open bars (e.g. Heritage Square), gatherings with direct access to the courtyard or large yard or a large pool area, catamaran cruises, beach and river picnics.

All residents of and visitors to St. Vincent and the Grenadines are reminded of the importance of consistently wearing facial coverings to protect themselves from being infected with the virus which causes COVID-19. Hand hygiene and physical distancing are also basic measures of infection prevention and control.

Kingstown, St. Vincent and the Grenadines

FIFTY-THREE (53) NEW CASES – TWO IMPORTED FROM THE USA

St. Vincent and the Grenadines confirmed fifty-three (53) new COVID-19 cases yesterday. Two (2) cases are non-nationals who arrived from the USA with negative RT-PCR tests and subsequently tested positive for COVID-19. All of the other cases are nationals detected during contact tracing, testing at flu clinics and targeted screening. There are now five hundred and fifteen (515) local cases of COVID-19, the majority of whom are linked to various clusters.

One hundred and twenty-two (122) persons have recovered, five hundred and thirty-one (531) cases remain active and two (2) persons with COVID-19 have died. Six hundred and fifty-five (655) cases of COVID-19 have been reported in St. Vincent and the Grenadines since March 2020. All positive cases will remain isolated until cleared.

The Molecular Laboratory Unit is once again experiencing delays in the processing and reporting of results for RT-PCR samples due to a significant back log. Persons awaiting results are asked to remain in quarantine and call the health care facility in their district responsible for COVID-19 services.

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

ONE DENGUE DEATH

SIXTY-TWO NEW COVID-19 CASES

St. Vincent and the Grenadines today recorded another death due to Dengue Fever. The fifteen (15) year old asthmatic female was admitted to hospital early in January 2021 with acute dengue fever and a severe allergic drug reaction. After remaining stable initially, the teenager developed complications one (1) week ago, deteriorated and died today.

One thousand, seven hundred and ninety (1790) laboratory confirmed cases of dengue fever have been recorded and eight (8) persons have died from the complications of severe dengue fever during this current outbreak.

Meanwhile, St. Vincent and the Grenadines today confirmed sixty-two (62) new COVID-19 cases. All of the cases are nationals detected during contact tracing, testing at flu clinics and targeted screening. There have now been four hundred and sixty-four (464) local cases of COVID-19, the majority of whom are linked to various cluster types including work sites, churches and private parties.

One hundred and nineteen (119) persons have recovered, four hundred and eighty-one (481) cases remain active and two persons (2) persons have died from the complications of COVID-19. A total of six hundred and two (602) cases of COVID-19 have been reported in St. Vincent and the Grenadines. All positive cases will remain isolated until cleared.

continued on following page…

Due to the continued robust contact tracing and active flu clinics, the Molecular Laboratory is still reporting delays in the processing and reporting of results for RT-PCR samples. The installation of additional equipment today is expected to significantly reduce the turn around time from testing to results, and so minimize these delays.

The public is asked to note that the Georgetown Health Centre will continue to offer routine community health services along with COVID-19 services in a separate flu clinic area.

FORTY-SIX (46) NEW COVID-19 CASES

St. Vincent and the Grenadines today confirmed forty-six (46) new COVID-19 cases. Forty-four (44) of the cases are nationals with no history of recent travel. One case is a non-national who traveled from Germany and another from Brazil. Both adults arrived with negative results and tested positive subsequently.

There are now four hundred and two (402) local cases of COVID-19 under investigation. These cases comprise residents from throughout St. Vincent and the Grenadines which have been linked to various types of clusters including work sites, churches and private parties.

One hundred and nineteen (119) persons have recovered, four hundred and nineteen (419) cases remain active and two (2) persons with COVID-19 have died. Five hundred and forty (540) cases of COVID-19 have been reported in St. Vincent and the Grenadines to date. All positive cases will continue to be isolated until cleared after fourteen (14) symptom free days and a negative PCR test result.

Persons in quarantine awaiting their results must strictly adhere to the requirements including not leaving their homes until cleared by their negative test results.

Persons with flu-like symptoms and close contacts of confirmed positive cases should seek health care at the following district health centres which will offer only COVID-19 related services:

1. Chateaubelair Health District
    a. Coull's Hill Health Centre
2. Pembroke Health District

continued on following page…

    a. Layou Health Centre
3. Kingstown Health District
    a. Kingstown Health Centre
4. Calliaqua Health District

SECOND COVID DEATH

St. Vincent and the Grenadines today recorded a second COVID-19 death. The eighty (80) year old male was admitted to the Milton Cato Memorial Hospital on Friday January 15, 2021, with complications of a chronic noncommunicable disease. The elderly gentleman tested positive for COVID-19 during the routine screening conducted on all admissions. The patient who was managed on the COVID-19 Isolation Ward became unstable and died at 430 am today, January 18, 2021.

Four hundred and ninety-four (494) cases of COVID-19 have been reported in St. Vincent and the Grenadines as of January 17, 2021. One hundred and eighteen (118) persons have recovered, three hundred and seventy-four (374) cases remain active and two (2) persons with COVID-19 have died.

Kingstown, St. Vincent and the Grenadines

SIXTEEN (16) NEW COVID-19 CASES

St. Vincent and the Grenadines today confirmed sixteen (16) new COVID-19 cases. All of the cases are nationals with no history of recent travel. Five (5) of the cases were detected during contact tracing, testing of persons with flu-like symptoms and general screening. Eleven (11) cases were detected during exit screening.

There are now three hundred and fifty-eight (358) local cases under investigation. Cases range in age from four (4) to eighty-seven (87) years. Most cases are located on mainland St. Vincent, with the highest numbers in the Pembroke Health District.

One hundred and eighteen (118) persons have recovered, three hundred and seventy-five (375) cases remain active and one (1) person with COVID-19 has died. Four hundred and ninety-four (494) cases of COVID-19 have been reported in St. Vincent and the Grenadines so far. All positive cases will continue to be isolated until cleared after fourteen (14) symptom free days and a negative PCR test result. This change in the criteria for clearance is supported by guidance from the WHO.

Persons who have been instructed to quarantine while awaiting their results, must not leave their quarantine sites until their tests results have been received. Persons who fall in this category will be served with a Medical Officer's order and granted sick leave. Employers are advised not to encourage their employees to break their quarantine orders.

SIXTY-TWO (62) NEW COVID-19 CASES – FIRST DEATH

St. Vincent and the Grenadines today recorded its first COVID-19 death. The forty-nine (49) year old female with multiple pre-existing conditions, presented to the Hospital Services during the evening of January 14 with difficulty breathing. The patient, who was confirmed to be positive for COVID-19 on admission, rapidly deteriorated and died at 5 pm today, January 15, 2021. There are now twenty-four (24) persons admitted with COVID-19.

There were an additional sixty-two (62) new COVID-19 cases confirmed overnight. One adult non-national arrived with a negative PCR test and tested positive on arrival. All of the other sixty-one (61) cases are nationals with no history of recent travel. These cases were detected during contact tracing, testing of persons with flu-like symptoms and exit screening. There are now three hundred and sixteen (316) local cases under investigation.

One hundred and ten (110) persons have recovered and three hundred and thirty-nine (339) cases remain active. A total of four hundred and fifty (450) cases of COVID-19 have been reported in St. Vincent and the Grenadines. All positive cases will continue to be isolated until cleared.

National Emergency Committee

Kingstown, St. Vincent and the Grenadines

FORTY-EIGHT (48) NEW COVID-19 CASES – FOUR IMPORTED

St. Vincent and the Grenadines today confirmed forty-eight (48) new COVID-19 cases. Four of the cases arrived with negative PCR results and tested positive on entry screening. All of the other forty-four cases are nationals with no history of recent travel. These cases were detected during contact tracing, testing of persons with flu-like symptoms and exit screening.

There are now two-hundred and fifty-five (255) local cases under investigation. Four (4) clusters associated with churches, four (4) with work sites and two (2) with holiday parties have been identified. Contact tracing, testing, quarantining and isolation continue, and are aimed at containing this COVID-19 outbreak in St. Vincent and the Grenadines. However, contact tracing is being hampered by the unwillingness of some persons to provide accurate information.

The strict compliance with quarantine and isolation is even more important now in order to suppress any further spread of this viral illness. Persons who have been instructed to quarantine while awaiting their results, must not leave their quarantine sites until they receive their tests results.

One hundred and seven (107) persons have recovered and two hundred and eighty-one (281) cases remain active. There are currently seventeen (17) COVID-19 patients admitted for care. A total of three hundred and eighty-eight (388) cases of COVID-19 have been reported in St. Vincent and the Grenadines. All positive cases will continue to be isolated until cleared.

The recommendations for the conduct of mass gatherings as issued on January 8, 2021, restricting the number of persons in an indoor gathering to ten (10) and an outdoor gathering to twenty (20), will be extended to January 25th, 2021. All of the other protocols and recommendations designed to safeguard the health and wellbeing of the Vincentian public, including those for the use of masks in all government buildings, must continue to be followed.

THIRTY-ONE (31) NEW COVID-19 CASES

St. Vincent and the Grenadines today confirmed thirty-one (31) new COVID-19 cases. All of the cases are nationals with no history of recent travel. There are now one hundred and fifty-five (155) local cases under investigation. One hundred and six (106) persons have recovered and one hundred and seventy-eight (178) remain active. A total of two hundred and eighty-four (284) cases of COVID-19 have been reported in St. Vincent and the Grenadines. All positive cases will continue to be isolated until cleared by two negative tests.

There are currently six (6) COVID-19 patients admitted for care. Four are assessed as stable and two as seriously ill.

The basic public health measures of mask wearing, physical distancing, hand hygiene and compliance with quarantine and isolation remain extremely critical to reducing the risk of contracting and spreading the virus which causes COVID-19.

PRESS RELEASE

FOR IMMEDIATE RELEASE
January 11, 2021

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

FOUR (4) NEW COVID-19 CASES

St. Vincent and the Grenadines today confirmed four (4) new COVID-19 cases. All of the cases are nationals with no history of recent travel. One (1) adult was detected during contact tracing. The other three (3) cases were found during testing for travel exit screens.

There are now one hundred and twenty-four (124) local cases under investigation. One hundred and six (106) persons have recovered and one hundred and forty-seven (147) remain active. A total of two hundred and fifty-three (253) cases of COVID-19 have been reported in St. Vincent and the Grenadines. All positive cases will continue to be isolated until cleared by two negative tests.

The established public health interventions of detection, testing and quarantining or isolation continue aimed at containing and suppressing this outbreak. The increased testing associated with these interventions coupled with the increased exit screening required for travelers to Canada and the United Kingdom, continues to be associated with a significant backlog of samples awaiting PCR processing. The addition over-night of 605 new samples has now resulted in more than nine hundred (900) samples waiting to be done. The recent engagement of more staff is expected to allow for the processing of these outstanding tests in the next three (3) days.

Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

TWENTY-FOUR (24) NEW COVID-19 CASES

St. Vincent and the Grenadines today confirmed twenty-four (24) new COVID-19 cases. One of the new cases is a nonnational who arrived from the UK on December 26, 2020 with a negative PCR test and tested positive during quarantine. All of the other twenty-three (23) new cases are nationals without a recent travel history.

A detailed review of all of the positive cases reported over the last two (2) weeks has led to a minor revision of the total number of cases under investigation. This reconciliation has confirmed that there are one hundred and twenty (120) local cases being investigated.

Two hundred and forty-nine (249) cases of COVID-19 have been reported in St. Vincent and the Grenadines since March 11, 2020. One hundred and six (106) persons have recovered and one hundred and forty-three (143) remain active. All positive cases will continue to be isolated until cleared by two negative tests.

There are currently four (4) COVID-19 patients admitted for care. All of these adults are stable.

NINETEEN (19) NEW COVID-19 CASES

St. Vincent and the Grenadines today confirmed nineteen (19) new COVID-19 cases. One of the new cases is a national who arrived from the USA on December 10, 2020 with a negative PCR test and tested negative on both entry and day 5 quarantine testing. The adult however tested positive on exit screening on January 5, 2021. All of the eighteen (18) other new cases are nationals without a recent travel history. The total number of cases under investigation is now ninety-nine (99). There are five (5) distinct clusters and several cases which have not been linked. Contact tracing, further linking and testing related to all of these local cases are ongoing.

St. Vincent and the Grenadines has now recorded two hundred and twenty-five (225) cases of COVID-19. One hundred and six (106) persons have recovered and one hundred and nineteen (119) remain active. All positive cases will continue to be isolated until cleared by two negative tests.

Due to the extensive testing being conducted as part of contact tracing and the screening of persons with flu-like symptoms, there is currently a back log of approximately 400 COVID-19 tests awaiting analysis.

FIFTY-FIVE (55) NEW COVID-19 CASES – THREE (3) IMPORTED

St. Vincent and the Grenadines today confirmed fifty-five (55) new COVID-19 cases. Three (3) cases are non-nationals who arrived on island between December 31, 2020 and January 4, 2021 with negative PCR test results, and subsequently tested positive during quarantine. Fifty-two (52) of these new cases are nationals without a recent travel history, bringing the total number of local cases under investigation to eighty (80). There are currently five (5) distinct clusters to which most cases can be linked. Contact tracing, further linking and testing related to all of these local cases are ongoing.

St. Vincent and the Grenadines has now recorded two hundred and four (204) cases of COVID-19. One hundred and two (102) persons have recovered and one hundred and two (102) remain active. All positive cases will continue to be isolated until cleared by two negative tests.

Persons with flu-like symptoms such as sore throat, fever and cough are advised to go to the nearest district Flu Clinic ensuring that they wear appropriate facial coverings. Persons with flu like symptoms should not use public transportation where possible. The Flu Clinics in the nine health districts are:

1. **Kingstown Health District** – Kingstown Health Centre
2. **Pembroke Health District** – Buccament Polyclinic, Layou Health Centre,
3. **Chateaubelair (North Leeward) Health District** – Coull's Hill Health Centre, Chateaubelair SMART Hospital
4. **Marriaqua Health District** – Levi Latham Health Complex, Evesham Health Centre, Lowmans Windward Health Centre
5. **Calliaqua Health District** – Stubbs Polyclinic, Belair Health Centre

Continued on next page

6. **Cedars Health District** – Biabou Health Centre, South Rivers Health Centre
7. **Georgetown (North Windward) Health District** – Georgetown Health Centrel, Sandy Bay Health Centre, Owia Health Center, Fancy Health Centre
8. **Northern Grenadines Health District** – Port Elizabeth Hospital
9. **Southern Grenadines Health District** – Celena Clouden Hospital, Mayreau Health Centre, Canouan Health Centre.

The protocol for mass gatherings has been revised and effective tomorrow January 8, 2021, indoor gatherings must be limited to ten (10) persons and outdoor gatherings to twenty (20). Additionally, public transportation vehicles will be required to limit the number of passengers to six (6) less than the number of passengers they are licensed to carry. As a result, an eighteen (18) seater van should only carry 12 passengers, a twenty-two (22) seater, sixteen (16) and a twenty-eight (28) seater, twenty-two (22) passengers.

The protocol for the entry of travelers to St. Vincent and the Grenadines has also been revised and effective Monday 11, January 2021, all travellers from high-risk countries must stay fourteen (14) days in a quarantine facility. Travellers from a medium risk country must stay seven (7) days in a similar facility.

The public is strongly urged to continue to wear facial coverings, sanitize hands regularly and maintain physical distancing as far as possible.

SIXTEEN (16) NEW CASES – FIVE (5) IMPORTED AND ELEVEN (11) UNDER INVESTIGATION

St. Vincent and the Grenadines today confirmed sixteen (16) new COVID-19 cases. Five (5) non-national adult travelers arrived from the USA and the UK between December 26th and January 3rd with negative PCR tests. Subsequent testing during the quarantine period revealed positive PCR results. These travelers remain isolated until cleared by two (2) negative results.

Eleven (11) adult nationals without a recent travel history have tested positive for COVID-19, bringing the total to twenty-eight (28). Ten (10) can be linked to the previously identified positive cases. The eleventh (11th) is being investigated. Contact tracing, linking and testing related to all of these local cases are ongoing.

Persons with flu-like symptoms such as sore throat, fever and cough are asked to go to the district Flu Clinics for testing and care. The Flu Clinics in the nine health districts are:

1. **Kingstown Health District** – Kingstown Health Centre
2. **Pembroke Health District** – Buccament Polyclinic, Layou Health Centre,
3. **Chateaubelair (North Leeward) Health District** – Coull's Hill Health Centre, Chateaubelair SMART Hospital

Kingstown, St. Vincent and the Grenadines

STATEMENT ON THE QUARANTINING OF SENIOR MANAGEMENT OF THE MOHWE

The Minister, Permanent Secretary, Chief Medical Officer and two members of the administrative staff of the Ministry of Health, Wellness and the Environment have been advised, out of an abundance of caution, to quarantine for a period of five (5) days ending Saturday January 9, 2021. This advice is based on contact tracing initiated during the evening of Tuesday January 5, after the receipt of a positive COVID-19 PCR result by a relative of a MOHWE staff member. The Minister and the four officers of the MOHWE, having been in close contact with the positive individual six (6) days previously, were tested during the evening of January 5 and found to be negative for COVID-19. However, as per protocol for persons exposed to a positive person, they were advised to immediately quarantine.

The Minister, Permanent Secretary and Chief Medical Officer will continue to work remotely from their quarantine locations.

Kingstown, St. Vincent and the Grenadines

NINE (9) NEW CASES – FOUR (4) IMPORTED AND FIVE (5) UNDER INVESTIGATION

St. Vincent and the Grenadines today confirmed nine (9) new COVID-19 cases. Four non-national adult travelers arrived from Brazil, the USA and the UK between December 20th and 27th with negative PCR tests. Subsequent testing during the quarantine period revealed positive PCR results. These travelers remain isolated until cleared by two (2) negative results.

An additional five (5) adult nationals without a recent travel history have tested positive for COVID-19, bringing the total to twelve (12). One (1) is linked to the December 28, 2020 cluster. The remainder continue to be investigated. Contact tracing, linking and testing related to these new cases are ongoing.

Increased testing of persons with flu-like symptoms such as sore throat, fever and cough continues at district health centres throughout the country. All patients seen at all health care facilities must wear facial coverings and will be screened for COVID-19. Additionally, general COVID-19 screening of various categories of workers will be undertaken by health care workers.

The public is strongly urged to wear facial coverings, sanitize their hands regularly and maintain physical distancing when possible.

St. Vincent and the Grenadines has now recorded one hundred and thirty-three (133) cases of COVID-19. One hundred (100) persons have recovered and thirty-three (33) remain active. All positive cases will continue to be isolated until cleared by two negative tests.

Kingstown, St. Vincent and the Grenadines

ONE NEW CASE FROM THE UK

St. Vincent and the Grenadines today confirmed one (1) new COVID-19 positive case. One adult non-national arrived on December 20, 2020 with a negative PCR and tested positive on exit screening. Contact tracing of these cases has commenced.

No further COVID-19 cases related to the recent cluster of local spread have been detected during testing on December 31, 2020 and January 1, 2021. The total number of cases in this cluster therefore remains at six (6). Contact tracing, retesting and quarantining by the COVID-19 Taskforce team will continue, aimed at further containing the local spread of COVID-19 in St. Vincent and the Grenadines.

St. Vincent and the Grenadines has now recorded one hundred and twenty-two (122) cases of COVID-19. Ninety-eight (98) have recovered and twenty-four (24) are active. All positive cases will continue to be isolated until cleared by two negative tests.

The Commissioner of Police has banned amplified music in public places and private place with access to the public. This ban applies to all events including church services. All mass gatherings without amplified music must comply with all of the measures of the Mass Gatherings Protocol including documentation of patrons, physical distancing, mask use and hygiene measures.

Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

TWO NEW CASES – ONE LOCAL & ONE FROM THE UK

The Health Services Subcommittee today confirmed another COVID-19 case related to the recent cluster of local spread, bringing the total to six (6). Intensive contact tracing has identified in excess of one hundred and twenty-five (125) contacts of these positive cases. Aggressive testing and quarantining by the COVID-19 Taskforce team are ongoing aimed at the containment of the local spread of COVID-19 in St. Vincent and the Grenadines.

The second new case is an adult who arrived from the UK on December 27th, tested negative on arrival but tested positive on December 29th. All positive cases are isolated until cleared by two negative tests.

The Health Services Subcommittee, in support of the public health interventions of the COVID-19 Taskforce team, has recommended that all mass gatherings be postponed. Where postponement of these gatherings is not possible, all of the measures of the protocol including documentation of patrons, physical distancing, mask use and hygiene measures must be enforced.

The Health Services Subcommittee appreciates the anticipated compliance of the public with the requirement to use facial coverings when in all government facilities. This measure will serve to reduce the likelihood of further spread of the COVID-19 in St. Vincent and the Grenadines.

St. Vincent and the Grenadines has now recorded one hundred and twenty-one (121) cases of COVID-19. Ninety-eight (98) have recovered and twenty-three (23) are active.

SIX NEW COVID-19 CASES

St. Vincent and the Grenadines today confirmed six (6) new COVID-19 cases. An adult non-national traveler arrived from the United Kingdom on December 26 with a negative PCR test result and tested positive on arrival screening. The traveller was in mandatory quarantine at the time of receipt of the result and will be isolated until cleared by two negative tests.

On Sunday December 27, the COVID-19 Taskforce was contacted by an adult Vincentian with symptoms typical of COVID-19. Testing on Monday December 28 confirmed that adult as positive. Subsequent contact tracing and testing have revealed 87 contacts and four (4) additional positive cases. Contact tracing and testing continue. All identified positives and their contacts have been isolated and quarantined. The source of infection of this cluster of local spread is still under investigation.

St. Vincent and the Grenadines has now recorded a total of one hundred and nineteen (119) COVID-19 cases, ninety-four (94) of which have recovered. There are now twenty-five (25) active COVID-19 cases.

The public is once again strongly advised to wear facial coverings when in the public or when unable to maintain sufficient physical distancing. All persons who have been advised to quarantine are urged to comply.

PRESS RELEASE

FOR IMMEDIATE RELEASE
December 28, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

FOUR NEW COVID-19 CASES FROM USA & UK

St. Vincent and the Grenadines today confirmed four (4) new COVID-19 cases. Two (2) adult travelers arrived from the United Kingdom on December 21 with negative PCR test results, tested negative on entry and positive day 5. One traveler who arrived on December 11 from the USA, tested positive after being in close contact with a known positive. The fourth new positive is a traveler who arrived from the USA on December 19 with a negative PCR, tested negative on entry and day 5, then positive on day 9. All persons are nonnationals and will be isolated until cleared by two negative tests. Contact tracing and testing have commenced.

The adult who was admitted to the Argyle Isolation Facility on December 24, 2020 is stable.

St. Vincent and the Grenadines has now recorded a total of one hundred and thirteen (113) COVID-19 cases, eighty-nine (89) of which have recovered. There are now twenty-four (24) active COVID-19 cases imported from high risk countries.

The Health Services Sub-committee is appreciative of the tremendous support of the public in the form of reporting suspected quarantine breakers. These community spirited actions serve to protect all persons in St. Vincent and the Grenadines.

Kingstown, St. Vincent and the Grenadines

ONE NEW COVID-19 CASE FROM USA

St. Vincent and the Grenadines today confirmed one (1) new COVID-19 case. The adult traveller is a national who arrived from the United States on December 19 with a negative PCR test result and tested positive on day 5. The traveller was in mandatory quarantine at the time of receipt of the result and will be isolated until cleared by two negative tests. Contact tracing and testing have commenced.

St. Vincent and the Grenadines has now recorded a total of one hundred and nine (109) COVID-19 cases, eighty-seven (87) of which have recovered. There are now twenty-two (22) active COVID-19 cases imported from high risk countries.

One adult returning national who was reported as positive on December 13, 2020, was admitted to the Argyle Isolation Facility on December 24, 2020. The patient reported shortness of breath and after initial assessment and stabilization at the Milton Cato Memorial Hospital, was transferred to the Isolation Facility for further care.

The Health Services Sub-Committee notes with continued concern the increasing reports of proprietors of approved accommodations allowing visitors to enter the rooms of persons under quarantine and other breaching of the quarantine protocols. Proprietors who fail to enforce the quarantine protocols on their properties will be removed from the list of approved accommodations.

Proprietors of hotels and guesthouses which are not on the list of approved accommodations for quarantine and still house or entertain guests who should be in quarantine, may be referred to the police for breaching of the Public Health Act. The public is reminded that the penalty for breaking quarantine is $2000 ECD for each day of the breach.

The recent increase in the number of reports of non-compliance with home quarantine re-emphasizes the critical need for the new "Protocol for Travellers to St. Vincent and the Grenadines" which became effective on December 23, 2020. This protocol requires that all travelers from high risk countries spend the entire ten (10) days of their mandatory quarantine in an approved accommodation.

THREE NEW COVID-19 CASES FROM UK AND CANADA

St. Vincent and the Grenadines today confirmed three (3) new COVID-19 cases. Two cases are returning nationals from the United Kingdom, one on December 13 and one on December 14, who arrived with negative PCR test results, both tested negative on entry and positive on day 5 screening. Another returning national arrived from Canada on December 14 with a negative PCR result, tested negative on arrival then positive on day 5 testing. All of these travelers were in mandatory quarantine at the time of receipt of these results and will be isolated until cleared by two negative tests. Contact tracing and testing have commenced.

St. Vincent and the Grenadines has now recorded a total of one hundred and seven (107) COVID-19 cases, eighty-five (85) of which have recovered. There are now twenty-two (22) active COVID-19 cases imported from high-risk countries.

All quarantine protocols and COVID-19 advisories must be followed to reduce the risk of the introduction and subsequent spread of new COVID-19 cases in St. Vincent and the Grenadines.

FOUR NEW COVID-19 CASES FROM USA, UK AND BVI

St. Vincent and the Grenadines today confirmed four (4) new COVID-19 cases. One case is a returning national who arrived with a negative PCR test result from the BVI on December 15, 2020, and tested positive on entry screening. Two UK nationals arrived on December 12 with negative PCR results, tested negative on arrival then positive on day 5 testing. The fourth traveler arrived from the USA on December 18, 2020 with a negative PCR result and tested positive for COVID-19 on entry screening. All of these travelers were in mandatory quarantine at the time of receipt of these results and will be isolated until cleared by two negative tests. Contact tracing and testing have commenced.

St. Vincent and the Grenadines has now recorded a total of one hundred and four (104) COVID-19 cases, eighty-five (85) of which have recovered. There are now nineteen (19) active COVID-19 cases, all imported from high-risk countries.

All quarantine protocols and COVID-19 advisories must be followed to reduce the risk of the introduction and subsequent spread of new COVID-19 cases in St. Vincent and the Grenadines.

The Molecular Lab Unit of the Ministry of Health, Wellness and the Environment will limit the processing of RT-PCR samples to emergencies only over the Christmas weekend. Persons intending to travel during this period should immediately seek advice on the scheduling of exit screens.

TWO NEW COVID-19 CASES FROM USA AND UK

St. Vincent and the Grenadines today recorded two (2) new COVID-19 cases. One case, a non-national, arrived with a negative PCR test result from the USA on December 7, 2020, tested negative on both entry screening and day 5 testing, and then tested positive on day eight (8) of quarantine. The other traveler arrived from the United Kingdom on December 12, 2020 with a negative PCR result and tested positive for COVID-19 on entry screening. The adult travelers were in mandatory quarantine and will be isolated until cleared by two negative tests. Contact tracing and testing have commenced.

St. Vincent and the Grenadines has now recorded a total of one hundred (100) COVID-19 cases, eighty- two (82) of which have recovered. There are now eighteen (18) active COVID-19 cases, all imported from countries categorized as high risk.

Residents and guests are again reminded of the importance of complying strictly with the requirements of quarantine for the entire period by all travelers, their families and friends. Persons in quarantine should not leave their homes unless authorized, nor should they entertain visitors or attend Nine Mornings festivities.

Residents of the Southern Grenadines are urged to refrain from traveling to Grenada and Carriacou at this time in view of the rapidly changing COVID-19 situation in these islands. Additionally all contact with persons from these islands should take place only after they have been cleared by the local health authorities.

All protocols and advisories including the use of facial coverings must be followed to reduce the risk of the introduction and subsequent spread of new COVID-19 cases in St. Vincent and the Grenadines.

FOUR NEW COVID-19 CASES FROM CANADA AND THE UK

St. Vincent and the Grenadines today recorded four (4) new COVID-19 cases. Three cases are returning nationals who arrived with negative PCR test results from the UK on November 28, 2020 and tested negative for SARS-CoV-2, the virus which causes COVID-19 on entry screening and day 5 testing. The three adults tested positive for COVID-19 during their nine (9) to fourteen (14) day quarantine period or after their five (5) day mandatory hotel quarantine.

The fourth case is also a returning national who also arrived on Monday, December 7 from Canada with a negative PCR test result, tested negative on entry screening and then positive on day 5 testing. The adult travelers were in mandatory quarantine and will be isolated until cleared by two negative tests. Contact tracing and testing have commenced.

St. Vincent and the Grenadines has now recorded a total of ninety-eight (98) COVID-19 cases, eighty-one (81) of which have recovered. There are now seventeen (17) active COVID-19 cases, all imported from countries categorized as high risk.

The new cases detected during the nine (9) to fourteen (14) day quarantine period reinforce the importance of complying strictly with the rules of quarantine for the entire period by all travelers, their families and friends. Persons in quarantine should not leave their homes unless authorized, nor should they entertain visitors or attend Nine Mornings festivities.

All protocols and advisories including the use of facial coverings must be followed to reduce the risk of the introduction and subsequent spread of new COVID-19 cases in St. Vincent and the Grenadines.

THREE NEW COVID-19 CASES FROM USA

St. Vincent and the Grenadines today recorded three (3) new COVID-19 cases. Two cases are returning nationals who arrived with negative RT-PCR test results from the USA on Saturday December 5, 2020, tested negative on entry screening then positive on day 5 testing for SARS-CoV-2, the virus which causes COVID-19. The third case is an American national who also arrived on Saturday December 5 from the USA with a negative RT-PCR test result, tested negative on entry screening and then positive on day 5 testing. The adult travelers were in mandatory quarantine and will be isolated until cleared by two negative tests. Contact tracing and testing have commenced.

St. Vincent and the Grenadines has now recorded a total of ninety-four (94) COVID-19 cases, eighty-one (81) of which have recovered. There are now thirteen (13) active COVID-19 cases, all imported from countries categorized as high risk.

The increased rate of the occurrence of positive cases in travelers to St. Vincent and the Grenadines over the last four weeks is associated with the major increase in cases in the USA, Canada and to a lesser extent the UK. All protocols must be followed to reduce the risk of the introduction and subsequent spread of new COVID-19 cases in St. Vincent and the Grenadines.

PRESS RELEASE

FOR IMMEDIATE RELEASE
December 8, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

THREE NEW COVID-19 CASES FROM USA & CANADA

St. Vincent and the Grenadines today recorded three (3) new COVID-19 cases. One case is a returning national who arrived with a negative RT-PCR test result from Canada on Monday December 7, 2020 and tested positive on entry screening for SARS-CoV-2, the virus which causes COVID-19. The second and third cases are American nationals who arrived from the USA also on Monday December 8, 2020. The adults arrived with a negative RT-PCR result, and tested positive on entry screening. All of these travelers are in mandatory quarantine and will be isolated until cleared by two negative tests. Contact tracing and testing have commenced.

St. Vincent and the Grenadines has now recorded a total of ninety (90) COVID-19 cases, eighty (80) of which have recovered. There are now ten (10) active COVID-19 cases, all imported from countries categorized as high risk.

The number of travelers from high risk countries such as the USA and UK are expected to increase as persons come to St. Vincent and the Grenadines for Christmas and the traditional winter tourist season. The risk of travelers testing positive for COVID-19 is expected to continue to increase. The need for strict compliance with the existing quarantine protocols by all, is extremely important if residents are to continue to live with minimal restrictions during the COVID-19 Pandemic. Travelers who complete their five days in an approved hotel must continue to quarantine at home for the entire additional nine (9) days in compliance with the fourteen (14) day Medical Officer Quarantine Order. Any interruptions to this fourteen-day quarantine should only be with the specific authorization from a Port Health Officer or according to established resort protocols.

PRESS RELEASE

FOR IMMEDIATE RELEASE
December 2, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

TWO NEW COVID-19 CASES - ONE FROM USA AND ONE FROM ENGLAND

St. Vincent and the Grenadines today recorded two (2) new COVID-19 cases. One case is a returning national who arrived with a negative RT-PCR test result from the England on Saturday November 28, 2020, tested negative on entry screening and on day five (5) tested positive for SARS-CoV-2, the virus which causes COVID-19. The second case is an American national who arrived from the USA also on Saturday November 28. The adult also arrived with a negative RT-PCR result, tested negative on entry screening, then positive on quarantine day five (5) testing. Both adults were in mandatory quarantine and will be isolated until cleared by two negative tests. Contact tracing and testing have commenced.

St. Vincent and the Grenadines has now recorded a total of eighty-seven (87) COVID-19 cases, eighty (80) of which have recovered. There are now seven (7) active COVID-19 cases, all imported from countries categorized as high risk.

St. Vincent and the Grenadines is currently classified as low risk for the transmission of COVID-19. However, some of our close neighbours such as Trinidad, St. Lucia and Martinique are classified as high risk and travelers from these countries have a higher risk of being infected with the coronavirus that causes COVID-19. All residents in St. Vincent and the Grenadines, especially those in the Southern Grenadines, North Windward and North Leeward communities of St. Vincent and the Grenadines such as Union Island, Fancy and Chateaubelair, must be especially careful and avoid any contact with persons traveling from these countries who have not been screened by our Port Health Teams.

Additionally, persons who are aware of unscreened travelers from these countries or who have themselves been in contact with such persons or who traveled to these high-risk neighbouring countries should alert their district health team. The public is reminded that most persons with COVID-19 do not have any symptoms, but can still infect persons they come into contact with.

ONE NEW COVID-19 CASE FROM CANADA

St. Vincent and the Grenadines today recorded one (1) new COVID-19 case. The new case is a returning national who arrived with a negative RT-PCR test result from Canada on Thursday November 12, 2020 on Air Canada AC980, tested negative on entry screening and on day five (5) testing. However repeat testing on day seven (7), due to assessed increased individual risk, was positive. The adult was in mandatory quarantine and will be isolated until cleared by two negative tests.

St. Vincent and the Grenadines has now recorded a total of eighty-four (84) COVID-19 cases, seventy-seven (78) of which have recovered. There are now six (6) active COVID-19 cases, all imported from countries categorized as "High Risk".

FIVE NEW COVID-19 CASES FROM CANADA AND THE USA

The Molecular Laboratory Unit of the Ministry of Health, Wellness and the Environment today confirmed five (5) new COVID-19 cases in St. Vincent and the Grenadines. Four (4) travelers are returning nationals who arrived with negative RT-PCR test results from Canada on Thursday November 12, 2020 on Air Canada AC980. Two nationals tested positive on preliminary entry screening for COVID-19 and were transferred from their quarantine sites to approved isolation. Repeat testing according to the existing multitiered system confirmed them as positive.

Two other nationals who arrived on Thursday 12 with negative RT-PCR results and tested negative on entry screening, tested positive on day five (5) testing on Monday November 16, 2020. Repeat testing today as part of the multitiered system confirmed them as positive. Both persons were in mandatory quarantine and will be isolated until cleared by two negative tests.

The fifth (5) case is a non-national who traveled from the USA via Barbados on Saturday November 14 with a negative RT-PCR result. The adult who was found to be positive on entry screening and subsequent repeat testing, will remain in isolation until cleared by two negative tests.

St. Vincent and the Grenadines has now recorded a total of eighty-three (83) COVID-19 cases, seventy-seven (77) of which have recovered. There are now six (6) active COVID-19 cases, all imported from countries categorized as “High Risk”.

ONE NEW COVID-19 CASE FROM THE UK

St. Vincent and the Grenadines today confirmed one new COVID-19 case. The traveler is a returning national who arrived with negative PCR test results.

The new case arrived from the UK on Wednesday, November 4 with a negative result, but tested positive on entry screening. Repeat testing according to the multi-tiered system, including testing done at CARPHA, confirmed this new positive case. The traveler was in mandatory quarantine when the initial positive result was determined and has since been isolated in an approved facility. The adult will remain in isolation until cleared with two negative PCR results.

St. Vincent and the Grenadines has now recorded a total of seventy-eight (78) COVID-19 cases, seventy-six (76) of which have recovered. There are now two (2) active COVID-19 cases, all imported from countries categorized as “High Risk”.

ONE NEW COVID-19 CASE FROM THE BVI

St. Vincent and the Grenadines today received confirmation of one new COVID-19 case. The traveler is a returning national who arrived with a negative PCR test result. The adult arrived from the BVI on November 4, having transited through Dominica and Barbados, and was negative by entry screen for COVID-19. However, on Friday November 6, the Ministry of Health of St. Vincent and the Grenadines was informed by the Ministry of Health Barbados that this traveler while in transit in Barbados was tested and a positive result returned. Subsequent in country retesting as per the existing multi-tiered system, gave a positive result. The CARPHA Public Health Lab confirmed the positive result today.

The traveler was in mandatory quarantine when their initial positive result was determined and has since been isolated in an approved facility. The traveler will remain in isolation until cleared with two negative PCR results. Contact tracing of this new case has so far revealed no additional positive cases. Further contact tracing and testing are ongoing.

St. Vincent and the Grenadines has now recorded a total of seventy-seven (77) COVID-19 cases, seventy-four (74) of which have recovered. There are now three (3) active COVID-19 cases, all imported from countries categorized as “High Risk”.

ONE NEW COVID-19 CASE FROM EUROPE

St. Vincent and the Grenadines today recorded a new COVID-19 case. The new case is a nonnational traveler who arrived from Europe with a negative PCR result, tested positive on screening on day 14. The traveler will remain in isolation until cleared with two negative PCR results. Contact tracing of this new case has so far revealed no additional positive cases. Further contact tracing and testing are ongoing.

St. Vincent and the Grenadines has now recorded a total of seventy-five (75) COVID-19 cases, seventy (70) of which have recovered. There are now five (5) active COVID-19 cases, all imported from countries categorized as "High Risk".

All travelers who arrive in St. Vincent and the Grenadines from November 1, 2020 until November 10, 2020, will remain in mandatory quarantine for five (5) days in a Tourism Authority/Ministry of Health, Wellness and the Environment approved hotel.

Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

ONE NEW COVID-19 CASE FROM ITALY VIA FRANCE AND MARTINIQUE

St. Vincent and the Grenadines today recorded a new COVID-19 case with the receipt of a confirmatory result from CARPHA. The new case is a traveller who arrived from Italy, travelling through France and Martinique before arriving on Friday, October 23, 2020 with a negative PCR result. The adult tested positive on entry screening and will remain in isolation until cleared with two negative PCR results.

All passengers who arrived on American Airlines 945 from Miami on Saturday 24, 2020, tested negative for COVID-19 on arrival. They will all remain in mandatory quarantine for five (5) days in a Tourism Authority/Ministry of Health, Wellness and the Environment approved hotel.

St. Vincent and the Grenadines has now recorded a total of seventy-four (74) COVID-19 cases, sixty-six (66) of which have recovered. There are now eight (8) active COVID-19 cases, all imported from countries categorized as “High Risk”.

The Health Services Subcommittee of the National Emergency Committee/Coronavirus Taskforce on Sunday, October 26, 2020 implemented a new protocol for the entry of travelers to St. Vincent and the Grenadines. This interim phase 5 protocol is effective from October 25 to November 10, 2020. It is aimed at addressing the increased risk of the introduction of new cases of COVID-19 into St. Vincent and the Grenadines because of the escalation in new COVID-19 cases in North America, Europe and the Caribbean region. This external escalation of new cases, coupled with the in-country election campaign associated mass gatherings, has the potential to increase the risk of local spread. All travellers must now arrive in St. Vincent and the Grenadines with a negative PCR result. In addition, travellers except those arriving from Barbados (having been there for at least 21 days) must quarantine in an approved hotel for five (5) days.

PRESS RELEASE

FOR IMMEDIATE RELEASE
October 23, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

FIVE NEW COVID-19 CASES FROM USA AND CANADA

St. Vincent and the Grenadines recorded five (5) new COVID-19 cases between Wednesday October 21 and Thursday October 22, 2020. All five (5) cases are travelers who arrived from the USA and Canada.

Four (4) of the new cases arrived from the USA with negative PCR results and tested positive on day 4/5 tests between Wednesday October 21 and Thursday October 22. The fifth (5^{th}) case arrived on Thursday October 22 on Air Canada with a negative PCR result (6 days old on arrival) and tested positive.

All of these new cases are in isolation and their contacts are being informed and checked for possible exposure as deemed appropriate. They will all remain in isolation until cleared by two (2) negative PCR test results.

St. Vincent and the Grenadines has now recorded a total of seventy-three (73) COVID-19 cases, sixty-four (64) of which have recovered. There are now nine (9) active COVID-19 cases, all imported from countries categorized as “High Risk”.

The Health Services Subcommittee of the National Emergency Committee/Coronavirus Taskforce again stresses the need for continued strict compliance with all of the protocols currently in place. Together, let’s keep St. Vincent and the Grenadines safe.

PRESS RELEASE

FOR IMMEDIATE RELEASE
October 21, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

COMPLIANCE WITH COVID-19 PROTOCOLS

The Health Services Subcommittee of the National Emergency Committee/Coronavirus Taskforce has noted a disturbing and increasing trend of travelers to St. Vincent and the Grenadines, requesting exemptions from presenting the required negative PCR result and/or quarantining in a Tourism Authority/MOHWE approved hotel for five (5) days, as indicated. It has also been noted that some local individuals are colluding with these travelers to aid their intentions of not complying with the existing protocols.

The public is reminded that the strict compliance with the protocols for travelers to St. Vincent and the Grenadines has served this country well so far. There is no evidence of local or community spread of COVID-19. Early detection and isolation of positive cases have prevented infection of other persons locally. These capacities are particularly vital in view of the rapidly rising numbers of infections in the USA, UK, Canada and our regional neighbors.

The Health Services Subcommittee advises that no exemptions will be granted in terms of the requirement to arrive with a negative PCR result, no older than five (5) days, where required. Additionally, no exemptions will be granted to the five (5) day mandatory quarantine in a TA/MOHWE approved hotel. Travelers from high risk countries will not be allowed to quarantine in their homes. The typical quarantine period of 14 days will be enforced. Any breaches of the Quarantine Orders as issued will be referred for prosecution. Any unauthorized deviation from these protocols puts all Vincentians at risk.

END

PRESS RELEASE

FOR IMMEDIATE RELEASE
October 20, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

ONE NEW COVID-19 CASE FROM USA

St. Vincent and the Grenadines recorded one new COVID-19 case today Tuesday October 20, 2020. The adult traveler arrived from the USA on Sunday, October 18, 2020, with a negative SASR-CoV-2 PCR test result. The adult will remain in isolation until cleared by two (2) negative SARS-CoV-2 PCR test results. All of the close contacts have been informed and will continue in quarantine as per their Medical Officer's Orders.

St. Vincent and the Grenadines has now recorded a total of sixty-eight (68) COVID-19 cases, sixty-four (64) of which have recovered. There are now four (4) active COVID-19 cases.

The Health Services Subcommittee of the National Emergency Committee/Coronavirus Taskforce urges continued compliance with all protocols in place designed to protect the Vincentian public.

PRESS RELEASE

FOR IMMEDIATE RELEASE
October 16, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

TWO NEW COVID-19 CASES FROM CANADA AND UK

St. Vincent and the Grenadines recorded two new COVID-19 cases today. Both new cases arrived on Caribbean Airlines BW200 on Thursday 15, 2020. One person traveled from the United Kingdom, transiting through Barbados. The other person also transited through Barbados, but from Canada. Both persons arrived with negative SASR-CoV-2 PCR test results. The adults will remain in isolation until cleared by two (2) negative SARS-CoV-2 PCR test results. All of the close contacts on the flight to St. Vincent are being informed and will continue in quarantine.

St. Vincent and the Grenadines has now recorded a total of sixty-seven (67) COVID-19 cases, sixty-four (64) of which have recovered. There are now three (3) active COVID-19 cases.

The USA, Canada and Europe are all reporting new spikes in the number of new COVID-19 cases. Neighboring islands are also reporting disturbing changes in the nature of the spread of COVID-19. These increases in the incidence of cases increase the risk of travelers arriving in St. Vincent and the Grenadines testing positive for SARS-CoV-2. In view of this increased risk, the Health Services Subcommittee of the National Emergency Committee/Coronavirus Taskforce will continue to closely monitor these situations and will recommend changes to the existing protocols as necessary.

PRESS RELEASE

FOR IMMEDIATE RELEASE
October 15, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

ONE NEW COVID-19 CASE FROM FLORIDA, USA

St. Vincent and the Grenadines recorded a new COVID-19 case today. The new case is an American national who arrived in St. Vincent and the Grenadines on Wednesday October 14, 2020, from Florida with a negative PCR result, and tested positive on entry screening. The adult, who went into quarantine after arrival, will continue in isolation until cleared by two (2) negative SARS-CoV-2 PCR test results.

All of the passengers who arrived on American Airlines 945 on Saturday October 10, 2020, were cleared by negative day 5 PCR tests. St. Vincent and the Grenadines has now recorded a total of sixty-five (65) COVID-19 cases, sixty-one (64) of which have recovered. There is now one (1) active COVID-19 case.

This new case from the USA, a country categorized as High Risk, emphasizes the great importance of strictly enforcing all of the protocols, including the requirement of arriving with a valid negative SARS-CoV-2 PCR test result, testing on arrival in St. Vincent and the Grenadines, mandatory quarantine in a quarantine/transition hotel and testing on day 4 or 5 of quarantine. These protocols are designed to protect all Vincentians and to allow for relatively unrestrained daily activities. As many countries in the world are recording increase COVID-19 activity, these protocols must be maintained and adhered to.

PRESS RELEASE

FOR IMMEDIATE RELEASE
September 17, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

NO ACTIVE COVID-19 CASES

St. Vincent and the Grenadines currently has no known active COVID-19 cases. This was confirmed by the receipt today of negative PCR results which completed the multitiered testing protocol in place in SVG. This process, as previously indicated, requires that preliminary positive results must trigger an aggressive intervention aimed at the rapid implementation of isolation, quarantine of contacts and additional testing.

The Vincentian nationals who arrived from the BVI on Saturday September 5 were swabbed on September 10 and tested positive for SARS-CoV-2 by RT-PCR on Friday September 11. As per protocol, additional RT-PCR tests were conducted at the Molecular Laboratory Unit of the Ministry of Health, Wellness and the Environment and at CARPHA, and returned negative results for SARS-CoV-2.

All passengers who arrived on AA 945 from Miami on Saturday 12, 2020 were found to be negative on RT-PCR testing for SARS-C0V-2, and have been released from their transition quarantine hotels.

St. Vincent and the Grenadines to date has recorded sixty-four (64) COVID-19 cases, all of whom have now been classified as recovered.

The public is again reminded of our shared responsibility of ensuring that everyone adheres to all of the protocols established in St. Vincent and the Grenadines aimed at reducing the risk of the importation and subsequent transmission of COVID-19 in St. Vincent and the Grenadines. These protocols, including testing, quarantine and isolation, are vital and have been proven to reduce the introduction and slow the spread of COVID-19 in St. Vincent and the Grenadines.

Kingstown, St. Vincent and the Grenadines

TWO NEW COVID-19 CASES FROM BVI

St. Vincent and the Grenadines today recorded preliminary positive results for two (2) new COVID-19 cases. Both new cases are returning nationals who arrived in St. Vincent and the Grenadines on Saturday, September 5 from the British Virgin Islands (BVI) with negative PCR results. Today's positive results were for day 6 testing as part of the protocol for persons traveling from High Risk countries such as the BVI.

All of the passengers who arrived on American Airlines 945 on Saturday September 5, 2020, were cleared by negative day 5 PCR tests for SARS-CoV-2. There was no Air Canada flight on Thursday September 10, 2020.

St. Vincent and the Grenadines has now recorded a total of sixty-four (64) COVID-19 cases, sixty-one (61) of which have recovered. There are now three (3) active COVID-19 cases.

These new cases from the BVI emphasize the great importance of strictly enforcing all of the protocols, including the quarantine orders and testing, that are designed to protect all Vincentians.

Over the past five (5) months we have worked very hard to contain any possible spread of COVID-19 in SVG by aggressive testing and quarantine enforcement. All persons entering SVG must comply with all of these measures if we are to avoid the rising levels of disease seen in other Caribbean countries.

Kingstown, St. Vincent and the Grenadines

ONE NEW COVID-19 CASE FROM JAMAICA

St. Vincent and the Grenadines today confirmed one (1) new COVID-19 case. The new case is a Vincentian national who arrived in St. Vincent and the Grenadines on September 5 from Jamaica. The inflight contacts of this person are in the process of being informed of their exposure.

St. Vincent and the Grenadines has now recorded a total of sixty-two (62) COVID-19 cases, fifty-eight (58) of which have recovered. There are now four (4) active COVID-19 cases.

Due to the rapidly increasing number of cases of COVID-19 in some CARICOM member states, the 'Protocol for the Entry of Travelers' into St. Vincent and the Grenadines was today revised to place the British Virgin Islands, Surinam, Guyana and Belize into the High Risk Category. Travelers from these countries will have to quarantine in a Tourism Authority/MOHWE approved Hotel for five (5) days at their cost.

The public is reminded of the importance of ensuring that all persons arriving in St. Vincent and the Grenadines comply fully with the quarantine protocols in place. These are designed to protect everybody including family and friends from COVID-19. Let us all keep SVG safe and healthy.

Kingstown, St. Vincent and the Grenadines

ONE MORE COVID-19 CASE FROM SWEDEN

St. Vincent and the Grenadines today confirmed one (1) new COVID-19 case. The new case belongs to the group of Swedish travelers who arrived in St. Vincent and the Grenadines on August 19 from Grenada with negative PCR results for tests done on August 15, 2020. The adult, a close contact of the last two positive cases announced on August 26, initially tested negative during the first round of contact tracing. Continued screening, as per the Ministry of Health, Wellness and the Environment's testing protocols, has now revealed this close contact as positive for SARS-CoV-2, the virus which causes COVID-19.

Extensive testing of all other possible contacts has not revealed any other positive cases or exposure to SARS-Cov-2. Further testing will continue.

Yesterday, Monday August 31, 2020 St. Vincent and the Grenadines introduced updated 'Protocols for the Entry of Travelers.' All travelers, regardless of country of origin, must arrive with a negative PCR test result. Countries have been categorized according to their level of COVID-19 disease. This will determine the quarantine of travelers from these countries when they arrive in St. Vincent and the Grenadines. Additional measures, aimed at increased surveillance, are being implemented throughout St. Vincent and the Grenadines.

All passengers who arrived on Air Canada 980 on Thursday August 27, have been cleared.

All passengers who arrived of AA 945 on Saturday August 29, will start receiving their quarantine day 4-5 PCR tests tomorrow September 2.

St. Vincent and the Grenadines has now recorded a total of sixty-one (61) COVID-19 cases, fifty-seven (57) of which have recovered. There are now four (4) active COVID-19 cases.

The public is urged to comply with all of the public health measures currently in place in St. Vincent and the Grenadines which are designed to keep COVID-19 contained.

TWO NEW COVID-19 CASES FROM SWEDEN

St. Vincent and the Grenadines today confirmed two (2) new COVID-19 cases. The non-nationals arrived from Sweden entering St. Vincent and the Grenadines from Grenada with negative PCR results on August 19. Both adults have been isolated since receipt of their preliminary positive results which were confirmed today. Extensive testing of all possible contacts has not revealed any other positive cases or exposure to SARS-Cov-2. Further testing will continue.

All passengers who arrived on Air Canada 980 on Thursday August 20, have been cleared.

All passengers who arrived of AA 945 on Saturday August 22, have received their quarantine day 4-5 PCR tests and are awaiting their results.

St. Vincent and the Grenadines has now recorded a total of sixty (60) COVID-19 cases, fifty-seven (57) of which have recovered. There are now three (3) active COVID-19 cases.

The public is urged to comply with all of the public health measures currently in place in St. Vincent and the Grenadines which are designed to keep COVID-19 contained.

Kingstown, St. Vincent and the Grenadines

ONE NEW COVID-19 CASE FROM USVI

St. Vincent and the Grenadines today confirmed one (1) new COVID-19 case. This case arrived from the USVI, was quarantined due to the high risk country of origin and has been isolated since receipt of their preliminary positive result. The adult is doing well and has no symptoms typical of COVID-19.

Fifty-two (52) passengers who arrived from Toronto, Canada on Air Canada 980 (AC 980) on Wednesday August 13, 2020, have been cleared from the mandatory quarantine. Six (6) AC 980 passengers who were determined to be high risk because of their country of origin or their occupation remain in hotel/home quarantine.

All of the fifty-six (56) passengers who arrived on American Airlines (AA) 945 on Saturday August 15 remain in mandatory quarantine.

Eight (8) COVID-19 cases recovered since August 6, 2020 as indicated by two negative results of RT-PCR tests.

St. Vincent and the Grenadines has now recorded a total of fifty-eight (58) COVID-19 cases, fifty-five (55) of which have recovered. There are now three (3) active COVID-19 cases.

The public is urged to comply with all of the public health measures currently in place in St. Vincent and the Grenadines which are designed to keep COVID-19 contained.

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

ONE NEW COVID-19 CASE ON QUARANTINE DAY 5 SCREENING

St. Vincent and the Grenadines confirmed one (1) new COVID-19 case. This new positive case arrived on Saturday August 1, 2020, from the USA on American Airlines 945, with a negative RT-PCR result. The Vincentian national, who is from a high risk occupation, tested negative for SARS-CoV-2 on entry screening and was quarantined for five days in an approved facility. The positive result was recorded on quarantine day 5 screening. The national who has no complaints, was placed in isolation in an approved private facility. This is the second traveler on the American Airlines 945 flight of August 1 to test positive for SARS-CoV-2, the virus which causes COVID-19.

Eight other high risk passengers from American Airlines 945 of August 1, will continue in quarantine for a total of fourteen days. All of the remaining ninety-three (93) passengers who arrived on that flight have been cleared.

All of the ninety (90) passengers who arrived on American Airlines 945 on Saturday August 8 are in mandatory quarantine.

Passengers who arrived from Toronto on Thursday August 6, 2020 on Air Canada Flight 980, have been released from mandatory quarantine, having all arrived with negative PCR tests or being found to be negative for the SARS-CoV-2 virus on entry screening.

Three (3) COVID-19 cases have recovered as indicated by two negative results of RT-PCR tests.

St. Vincent and the Grenadines has now recorded a total of fifty-seven (57) COVID-19 cases, of which fifty-two (52) have recovered. There are now five (5) active COVID-19 cases.

Travelers from countries with significant COVID-19 community spread and those from occupational groups found to have high levels of COVID-19 are considered high risk passengers and will continue to be subject to increased screening and quarantine requirements. Travelers from countries such as the USA, Brazil and the Dominican Republic, and occupations such as Oil Rig and Health Care Workers are considered high risk.

The Health Services Subcommittee will continue to monitor the ever changing course of the COVID-19 Pandemic, and will amend the existing protocols as necessary to keep all of St. Vincent and the Grenadines healthy.

Kingstown, St. Vincent and the Grenadines

ONE NEW COVID-19 CASE FROM AA 945 AUGUST 1

St. Vincent and the Grenadines today confirmed one (1) new COVID-19 case. This case arrived on American Airlines (AA) 945 flight on August 1, 2020 and the individual has been isolated since receipt of their preliminary positive result. The Vincentian national is doing well and has no symptoms typical of coronavirus.

All of the other one hundred and two (102) AA 945 passengers who arrived from Miami on Saturday August 1, 2020, are in mandatory quarantine, and will be tested for the SARS-CoV-2 virus between day four (4) and five (5) of quarantine.

The two Vincentians who tested positive for SARS-CoV-2 after arrival on AA 945 on July 25, were initially isolated in the Argyle Isolation Facility (AIF) to ensure that they comply with their isolation. Both patients were not ill on admission, and continue to be asymptomatic COVID-19 cases. One person has been released from the AIF to continue isolation in their isolation approved home. The other individual remains at the facility.

One COVID-19 case recovered as indicated by two negative results of RT-PCR tests.

St. Vincent and the Grenadines has now recorded a total of fifty-six (56) COVID-19 cases, forty-six (46) of which have recovered. There are now ten (10) active COVID-19 cases.

The public is urged to continue to work with the health and security services to keep St. Vincent and the Grenadines healthy. This can be achieved, once everyone adheres to all quarantine and isolation orders.

PRESS RELEASE

FOR IMMEDIATE RELEASE
August 1, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

ONE NEW COVID-19 CASE ON ENTRY SCREENING

St. Vincent and the Grenadines today confirmed one (1) new COVID-19 case. This case arrived on Monday July 27, 2020, from the US Virgin Islands. The visitor has been isolated since the receipt of their preliminary positive results, and is doing well with no symptoms typical of coronavirus.

All of the one hundred and four (104) Air Canada 980 passengers who arrived from Toronto on Thursday July 30, 2020, have been released from mandatory quarantine, having all arrived with negative PCR tests or being found to be negative for the SARS-CoV-2 virus on entry screening.

One hundred and three (103) passengers arrived today, August 1, 2020, from Miami, Florida on AA 945. All passengers were placed on mandatory five (5) day quarantine.

One (1) COVID-19 case recovered as indicated by two negative results of RT-PCR tests.

St. Vincent and the Grenadines has now recorded a total of fifty-five (55) COVID-19 cases, of which forty-four (45) have recovered. There are now ten (10) active COVID-19 cases.

The public is asked to note that the CARICOM Bubble as initially considered, 'no test and no quarantine' was not implemented today August 1, 2020. Rather, travelers from countries in the CARICOM Bubble (Anguilla, Antigua and Barbuda, Barbados, BVI, Dominica, Grenada, Jamaica, Montserrat, St. Kitts and Nevis, St. Lucia and Trinidad and Tobago) will either have a PCR done on arrival or be allowed to enter with a seven (7) day old PCR test instead of a five (5) day old one.

The public is reminded that the recommendations for the conduct of mass gatherings, with or without amplified music, have been continued until August 31, 2020. The safe use of facial coverings when in the public is strongly recommended.

The health of Vincentians is a shared responsibility. This was forcefully demonstrated by the recent successful collaboration between the Royal St. Vincent and the Grenadines Police Force and the Health Services Subcommittee – "Health Security is National Security".

Kingstown, St. Vincent and the Grenadines

TWO NEW COVID-19 CASES & FIVE RECOVERIES

St. Vincent and the Grenadines today confirmed two (2) new COVID-19 cases. Both cases arrived on American Airlines (AA) 945 flight on Saturday July 25, 2020 and have been isolated since the receipt of their preliminary positive results. Both are doing well and have no symptoms typical of coronavirus.

All of the other ninety-three (93) AA 945 passengers who arrived from Miami on Saturday July 25, 2020, have been released from mandatory hotel quarantine, having tested negative for the SARS-CoV-2 virus on day five (5) of quarantine. They will continue in home self-quarantine for nine (9) more days, unless otherwise advised.

The Vincentian who arrived on AA 945 on July 18, and had a preliminary positive on day five of quarantine, was determined not to be an active case of COVID-19. That person has been released from isolation.

The Air Canada 980 Vincentian passenger who arrived on July 23, 2020, and was classified as a preliminary positive, remains under investigation.

Five (5) COVID-19 cases recovered as indicated by two negative results of RT-PCR tests.

St. Vincent and the Grenadines has now recorded a total of fifty-four (54) COVID-19 cases, of which forty-four (44) have recovered. There are now ten (10) active COVID-19 cases.

The public is urged to work with the health and security services to keep St. Vincent and the Grenadines healthy. This can be achieved, once everyone adheres to all quarantine and isolation orders.

PRESS RELEASE

FOR IMMEDIATE RELEASE
July 27, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

NEW PROCESS TO DETECT COVID-19 CASES IMPLEMENTED

The Health Services Subcommittee of the National Emergency Committee has implemented a multitiered verification process to confirm new COVID-19 cases. This process involves the use of multiple tests to confirm the detection of, or exposure to SARS-CoV-2, the virus which causes COVID-19. This new process has resulted in a recent delay in the reporting of new COVID-19 cases. This process also resulted in what appeared to be the "rapid recovery" of eight (8) cases who were classified as recovered by the verification process.

There has however been no delay in notifying those persons with a preliminary positive COVID-19 test result of their status and required immediate isolation, until confirmation of their result. The contacts of those persons with preliminary positive results are also notified and advised to

quarantine. These immediate notifications are in keeping with a "No regrets" policy aimed at reducing any possible risk of exposure to SARS-CoV-2 and COVID-19

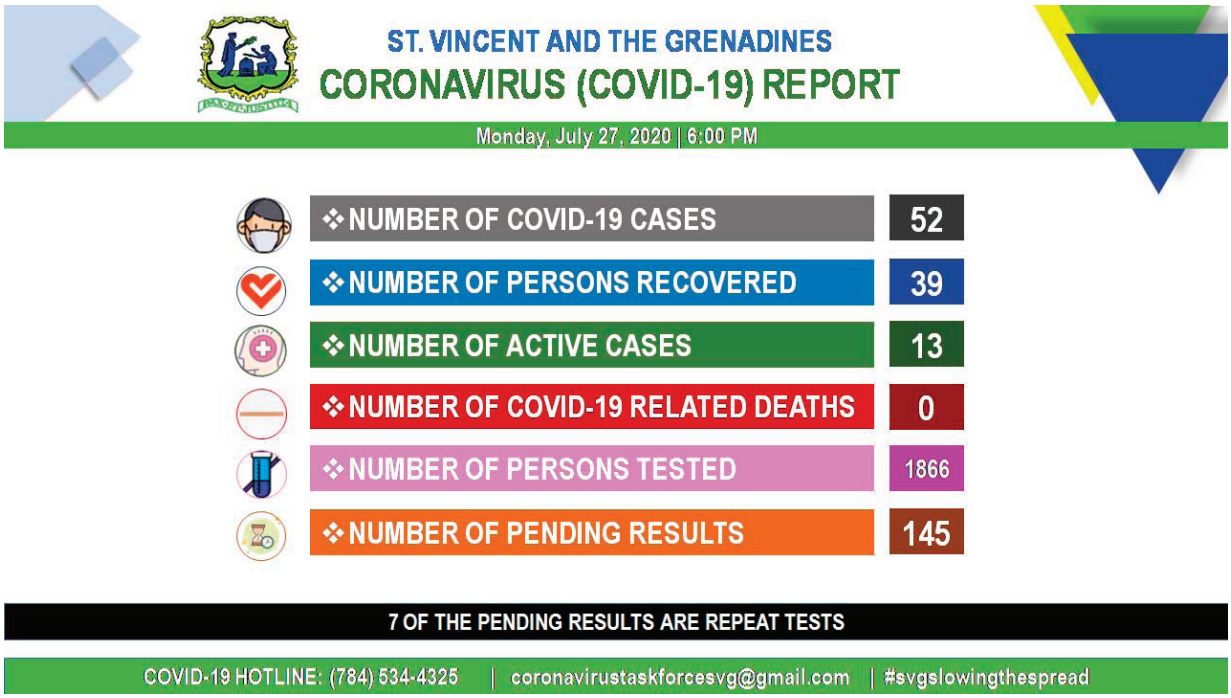
Four persons have been informed of their preliminary positive results and placed in isolation. Their contacts have been notified and quarantine implemented, or continued. One case arrived in St. Vincent and the Grenadines on AA 945 on July 18, and their preliminary result was detected during the five (5) to seven (7) day mandatory quarantine period. One preliminary case arrived on July 23 on Air Canada 980, having transited through Canada to St. Vincent and the Grenadines. Two (2) other preliminary cases were detected during analysis of swabs taken for COVID-19 PCR from all ninety-five (95) passengers who arrived on Saturday July 25 on AA 945. The verification process for all of these results is ongoing and any new confirmed positive case will be reported.

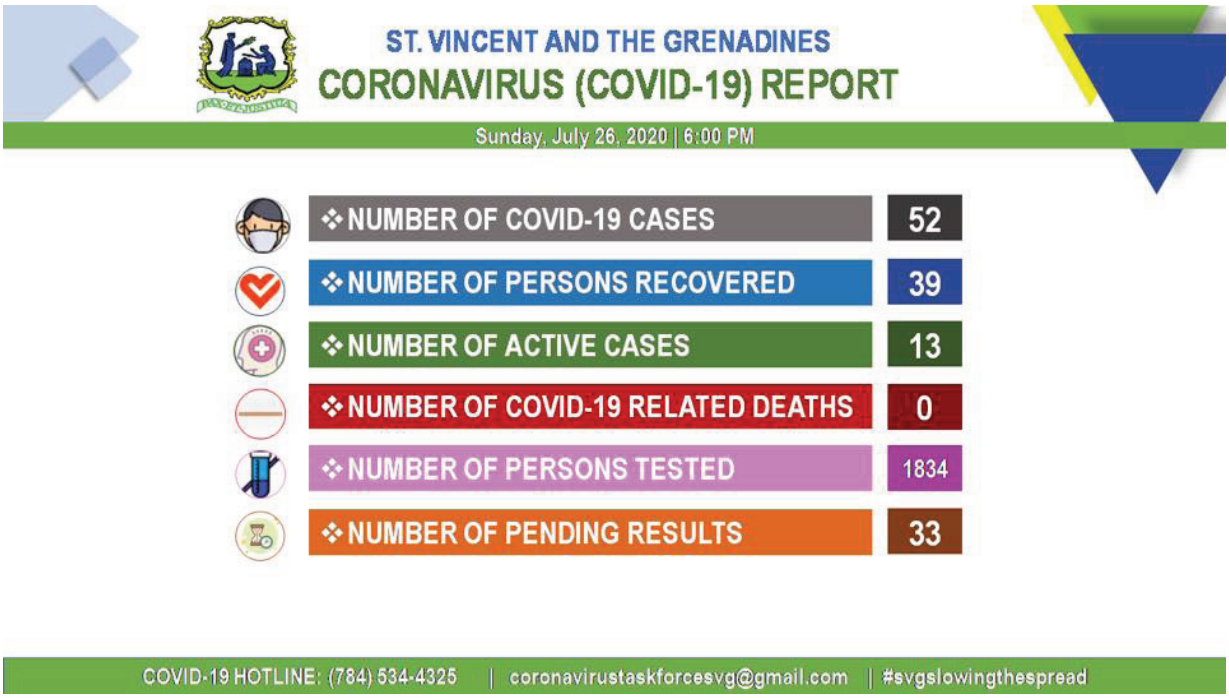
The new protocol for travellers on commercial flights from the USA, whether direct or transiting from neighbouring counties, was implemented for AA 945 on Saturday July 25. Ninety-five (95) of the one hundred and forty (140) passengers booked on that flight were allowed to board in Miami. Forty-five (45) passengers were denied boarding because they lacked the required PCR results. All of the arriving passengers had the required entry screening PCR test and were issued mandatory five (5) day hotel quarantine instructions. Ninety-four (94) persons complied with the order. One (1) person is considered to have broken the quarantine order and has been referred to the Royal St Vincent and The Grenadines Police Force.

St. Vincent and the Grenadines currently has thirteen (13) active cases of COVID-19. This, from an overall total of fifty-two (52) confirmed cases on record.

The public is advised that all protocols will be revised as necessary, based on the changing nature of the COVID-19 disease and compliance of the public and travellers to St. Vincent and The Grenadines. The importance of strict compliance to all quarantine and isolation orders is paramount. It is only by complying with these orders and the use of masks in public spaces that the spread of COVID-19 can be controlled in St. Vincent and the Grenadines.

-END-





As of July 25th, quarantine numbers are no longer included in the daily "dashboard" stats. CMO Keizer-Beache, speaking on July 24th, explained this decision as follows:

> *"…we have a lot of flights coming in, and we have a lot of persons on yachts and the quarantine period which might be determined at the beginning of your visit, can change depending on the timing, especially with the flights. We are not going to list the numbers in quarantine because the quarantine can be from 24 hours up to 14 days. Keeping that on track, even though we are monitoring persons, it is becoming extremely inaccurate to be putting a figure today which continues into tomorrow, because it's changing constantly."*

National Emergency Committee

Kingstown, St. Vincent and the Grenadines

TWO (2) NEW COVID CASES

St. Vincent and the Grenadines recorded two (2) new COVID-19 cases, with the receipt of results from the CARPHA Public Health Lab. One (1) case arrived on the AA 945 flight on Saturday July 11, 2020, and is a contact of a positive case on that flight. The second case, detected on entry screening, arrived from St. Lucia on Sunday 19, 2020. Both persons are in isolation, and the process of contact tracing and informing has commenced.

Eight (8) persons were classified as recovered after the verification process. St. Vincent and the Grenadines therefore currently has fifteen (15) active COVID-19 cases. A total of fifty-two (52) COVID-19 cases have been recorded with thirty-seven (37) recoveries and zero (0) deaths.

The importance of strict compliance to all quarantine and isolation orders is paramount. It is only by complying with these orders and the use of masks in public spaces that the spread of COVID-19 can be controlled in St. Vincent and the Grenadines.

National Emergency Committee

Kingstown, St. Vincent and the Grenadines

SIX (6) NEW COVID CASES

St. Vincent and the Grenadines recorded six (6) new COVID-19 cases, with the receipt of results from the CARPHA Public Health Lab late this evening. Four (4) of the cases are from the AA 945 flight which arrived on Saturday July 18, 2020 from Miami. One case is a Vincentian returning home from Antigua and one was found on exit screening for a Vincentian who visited briefly from Barbados. The process of informing and contact tracing has commenced.

St. Vincent and the Grenadines therefore currently has twenty-one (21) active COVID-19 cases. A total of fifty (50) confirmed COVID-19 cases with twenty-nine (29) recoveries and zero (0) deaths.

The importance of strict compliance to all quarantine and isolation orders is paramount. It is only by complying with these orders and the use of masks in public spaces that the spread of COVID-19 can be controlled in St. Vincent and the Grenadines.

PRESS RELEASE

FOR IMMEDIATE RELEASE
July 19, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

MORE COVID CASES

St. Vincent and the Grenadines has recorded an additional three (3) COVID-19 cases associated with the AA 945 flight of July 11, 2020, following receipt of PCR results from the CARPHA Public Health Laboratory. This brings to twelve (12) the number of COVID-19 cases associated with this flight. Further results from second round testing related to that flight, are outstanding.

Initial testing of COVID-19 PCR samples collected yesterday July 18, 2020 for the AA 945 flight from Miami has preliminarily revealed four (4) positive cases. All samples have been sent to CARPHA for analysis as part of the multi-tiered verification system in place. All of the persons who arrived on yesterday's flight were placed on mandatory quarantine and must adhere to this order. The public is reminded of the high risk of contracting Covid-19 from persons who may appear well and have arrived with a negative COVID-19 test, but may still be carrying the SARS-CoV-2 virus which causes COVID-19. Further updates will be provided upon receipt of the outstanding results.

Two (2) new COVID-19 cases, not associated with the AA flights have also been detected during exit screening. These cases are under investigation. One new COVID-19 case arrived on another

airline from the British Virgin Islands. All active cases are in isolation. Contact tracing and subsequent mandatory quarantine have commenced for these new cases.

St. Vincent and the Grenadines currently has fifteen confirmed (15) active COVID-19 cases and four (4) preliminarily confirmed active cases. A total of forty-four (44) finally confirmed COVID-19 cases are now on record, with twenty-nine (29) recoveries and zero (0) deaths.

In light of the uncontrolled nature of the COVID-19 epidemic in the USA and in particular Florida and the significant potential impact on the health system of St. Vincent and the Grenadines, the Health Services Subcommittee of the National Emergency Committee has recommended that the AA 945 flight from Miami be monitored closely with a view to discontinuation. Going forward all passengers arriving on the AA 945 flight from Miami and those transiting to SVG, having travelled on any commercial flight out of the USA:

1. Must arrive with a negative COVID-19 PCR test result
2. Must arrive with proof of a reservation in a TA/MOHWE approved hotel for five (5) nights.
3. Will be quarantined in a TA/MOHWE approved hotel for five (5) days.
4. Will be tested for COVID-19 before release from the quarantine approved hotel.
5. Will continue quarantine in an approved home/facility for a period of nine (9) to sixteen (16) days for a total of fourteen (14) to (21) days.

The importance of strict compliance to all quarantine and isolation orders is paramount. It is only by complying with these orders along with the use of masks in public spaces that the spread of COVID-19 can be controlled in St. Vincent and the Grenadines.

PRESS RELEASE

FOR IMMEDIATE RELEASE
July 17, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

Three (3) NEW COVID CASES

St. Vincent and the Grenadines today recorded three (3) new COVID-19 cases, following the receipt of PCR results from the local Molecular Laboratory Unit. Two of the new positive cases are returning Vincentians who arrived here on the AA 945 flight on Saturday, July 11th and initially tested negative for COVID-19. The third case is a contact of one of the original positive cases who arrived on Saturday 11, 2020. The new positive cases are in quarantine having been identified as high-risk travellers on arrival, or a contact of a known positive case. They will be in isolation until they are cleared by two (2) negative PCR tests. All of the contacts of these new positive cases have been informed and will be quarantined until cleared by a negative PCR.

The other AA 945 passengers who were in close contact on board the flight with known positive cases, or were otherwise identified as high risk, received a second PCR test on day 5 or 6. All of these second PCR tests are negative.

St. Vincent and the Grenadines now has nine (9) active COVID-19 cases, all imported or import related. Some thirty-eight (38) COVID-19 cases have been recorded with twenty-nine (29) recoveries and zero (0) deaths.

In view of the significant number of new COVID-19 cases related to AA 945 on Saturday 11, and the worsening situation relative to COVID-19 in the United States of America, especially Miami, Florida, the origin of the AA 945, the Health Services Subcommittee of the National Emergency Committee has amended the arrival protocol with immediate effect. As of Saturday July 18, all passengers arriving on AA 945 from Miami International Airport will be subject to five (5) days mandatory quarantine. Passengers who arrive without a PCR result will have a PCR test done at the AIA. A second PCR test may be done between day 5 and day 7 to determine further continuation of quarantine. Port Health Officers will make the final determination

The public is reminded that persons are placed in quarantine for stipulated periods based on their ongoing possibility of being COVID-19 positive, even after a previous negative COVID-19 result. The Health Services Sub-Committee of the National Emergency Committee urges all Vincentians to be aware of their health and to report any feelings of being unwell to health care providers. Everyone must remain vigilant, comply with quarantine and isolation orders and all of the recommendations issued, relative to COVID-19.

Adherence to the recommendations for the conduct of mass gatherings, especially the smart use of masks, keeping a registry of persons attending events and hand hygiene, are extremely important as more persons from countries with active COVID-19 community spread, arrive in St. Vincent and the Grenadines.

PRESS RELEASE

FOR IMMEDIATE RELEASE
July 12, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

SIX (6) NEW COVID CASES

St. Vincent and the Grenadines today recorded six (6) new COVID-19 cases, following the receipt of PCR results from the Caribbean Public Health Agency – CARPHA this evening. Results are reported following a two-step verification process which includes both the CARPHA Public Health Lab and the local Molecular Laboratory Unit. The new positive cases are returning residents who arrived here on the AA 945 flight on Saturday, July 11th with one hundred and fifty-five (155) passengers. These new positive cases will now commence a fourteen (14) day isolation period. Sixty-nine (69) other passengers who were in close contact on board the flight with the new positive cases, will be required to quarantine for fourteen (14) days.

The other one hundred and forty-nine (149) passengers who arrived on the flight had negative results either having brought these results with them, or receiving negative results for COVID-19 PCR tests, done on arrival in St. Vincent and the Grenadines. Some passengers, regardless of PCR result test have been assessed as being high risk for COVID-19 and will continue in mandatory quarantine for a period of fourteen (14) days. A second COVID-19 PCR test may be conducted on all contacts and other high risk passengers during the five to seven day period following arrival.

The Health Services Sub-Committee of the National Emergency Committee urges all Vincentians to remain vigilant, comply with quarantine and isolation orders and all of the recommendations issued relative to COVID-19, including those for the conduct of mass gatherings . The public is reminded that persons are placed in quarantine for stipulated periods because of their ongoing risk of being COVID-19 positive, despite having a previous negative COVID-19 result.

PRESS RELEASE

FOR IMMEDIATE RELEASE
June 25, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

NO ACTIVE COVID-19 CASES IN SVG

St. Vincent and the Grenadines has no known active COVID-19 cases following the recovery of the last two cases. These recoveries were indicated by the negative results of RT-PCR tests conducted at the Molecular PCR Laboratory Unit of the Ministry of Health Wellness and the Environment and confirmed by the Caribbean Public Health Agency (CARPHA) Public Health Laboratory in Trinidad today. The two (2) second negative results required to clear the positive cases were among a batch for 23 samples, 18 of which belonged to the Vincentians repatriated from Cuba on Monday June 22. All of the samples were negative and were processed at our local PCR lab and also sent to CARPHA, where the results were confirmed.

St. Vincent and the Grenadines now has twenty-nine (29) recovered cases of COVID-19.

The public is reminded of the importance of maintaining the public health measures currently in place which include appropriate mask use, hand hygiene, cough etiquette, physical distancing of at least 3-6 feet in public spaces and strict adherence to quarantine and isolation. These measures, are vital and are proven to slow the spread of COVID-19.

PRESS RELEASE

FOR IMMEDIATE RELEASE
June 18, 2020

ONE MORE RECOVERED, 75 NCL CREWMEMBERS DISEMBARKED

St. Vincent and the Grenadines now has twenty-six (26) recovered COVID-19 cases. This follows the receipt of the second negative PCR result for one person from the Public Health Laboratory at CARPHA. These results were included in a batch of results for twenty-five (25) samples sent to the lab on Wednesday June 17, 2020. Four (4) Disney Crew members who disembarked on June 15, also tested negative for COVID-19.

No new positive COVID-19 cases were reported, so there are now three (3) active cases of COVID -19 in St. Vincent and the Grenadines, out of a total of twenty-nine (29) recorded cases.

The entire group of seventy-five (75) Vincentian Crew members on board the Norwegian Cruise Line vessel, Oceania Marina which docked at Port Kingstown today, tested negative for COVID-19. Swabs for these PCR tests were collected on June 16, processed at the BEST-dos SANTOS Public Health Laboratory in Barbados and reported today June 18. All of these nationals are scheduled to disembark on Friday June 19 and will complete a fourteen (14) day mandatory quarantine in their homes or a government approved facility.

The public is again urged to maintain strict hand hygiene, cough etiquette, physical distancing in public spaces, smart mask use and strict adherence to quarantine and isolation instructions to ensure that we continue to slow the spread of COVID-19 in St. Vincent and the Grenadines.

HEALTH SERVICES SUBCOMMITTEE

PROTOCOL FOR THE ENTRY OF TRAVELLERS TO ST. VINCENT AND THE GRENADINES – July 1-31/2020

(17/06/2020)

AIM: The safe entry of travelers to St. Vincent and the Grenadines in a manner that reduces the risk of the importation and subsequent transmission of COVID-19 in St. Vincent and the Grenadines.

OBJECTIVES:

1. Establish the risk of the arriving traveler introducing new COVID-19 to SVG.
2. Minimized exposure of residents of SVG to new COVID-19
3. Early identification of potential exposure to new COVID-19
4. Early containment of new COVID-19.

ESTABLISH RISK OF ARRIVING TRAVELER:

1. Completion of VINCYCOVID online* application process

   Or

   Completion of VINCYCOVID questionnaire on flight prior to arrival.

2. Completion of Health forms at POE Port Health Officers.

TESTING & QUARANTINE REQUIREMENTS:

- PHASE #1-The period of July 1-30 will be used to determine the incidence of COVID-19 in passengers arriving from different countries. All travelers to SVG will have a PCR COVID-19 test done on arrival.

- PHASE #2 - Commencing August 1, 2020, based on the data gained during Phase #1and the current epidemiology of the COVID-19 Pandemic, travelers arriving will be subjected to PCR COVID-19 testing depending on their country of origin.

- The CARICOM Bubble consists of Anguilla, Antigua and Barbuda, Barbados, BVI, Dominica, Grenada, Guyana, Jamaica, Montserrat, St. Kitts and Nevis, St. Lucia and Trinidad and Tobago.

- Country of Origin (present in country for at least 14 days):

    - CARICOM Bubble:
        - COVID-19 Questionnaire
        - No COVID-19 laboratory test
    - Non- CARICOM Bubble:
        - COVID-19 Questionnaire
        - PCR testing on arrival
        - Court Order 24 hour quarantine (await results in home or hotel)
        - Arriving with Negative Antibody tests results (test within 5 days) and Negative PCR result (test within 2 days) – no quarantine
        - Bubble Island/Hotel Negative Antibody tests results (test within 5 days) and/or Negative PCR result (test within 2 days) – no quarantine

PROCESS ON ARRIVAL:

1. Pre-arrival check in at port:
    a. VINCYCOVID APP(in progress) Approval
    Or
    b. VICNYCOVID Questionnaire

2. Testing Protocol for travelers meeting the testing requirement:
    a. Port Health Team will collect specimen for an **SVG COVID-19 PCR** test from all qualifying disembarking travelers prior to being granted permission to leave the Port of Entry for 24 hour quarantine to await result.
    b. All travelers who entered with approved documentation of a negative (IgG & IgM) COVID-19 antibody test done within the past 5 days and a negative

SVG COVID-19 PCR test, will not need to quarantine. Such a traveler would be required to monitor their temperatures for the next 14 days and report any elevations to the local health authority.

c. All travelers who entered with approved documentation of a negative (IgG & IgM) COVID-19 antibody test done within the past 5 days and/or a negative **COVID-19 PCR** test done within 2 days, will not need to quarantine. Such a traveler would be required to monitor their temperatures for the next 14 days and report any elevations to the local health authority.
d. All travelers who entered with approved documentation of a negative COVID-19 antibody test done within the past 5 - 7 days but a positive **SVG COVID-19 PCR** test, will be isolated in an approved facility for the next 14 days at the cost of the traveler.
e. Travelers who arrive without any approved COVID-19 test results may be subjected to both rapid antibody and PCR specimen collection prior to departing the airport to private accommodation.

3. Testing procedure:
    a. All passengers will be screened before entering the arrivals area. Screening may include probing for symptoms, temperature checks and laboratory specimen collection.
    b. Hand hygiene will be enforced.
    c. Photo identification is required for ALL.
    d. Area for screening will be sanitized after each group is screened.
    e. All travelers will be required to go immediately to their private accommodation site to await the results of the PCR test.
    f. Persons going to a government facility will be boarded on agreed appropriate vehicles to await departure.
    g. Persons with adequate home facilities for quarantine (relative to risk assessment) will be allowed to leave.

REQUIREMENTS OF DISCHARGE FROM 24 hour QUARANTINE:

1. **Objective measures:**
    a. Negative Rapid Antibody Test or
    b. Negative PCR Test and
    c. Absence of signs and symptoms of COVID-19.
2. No known exposure to a known COVID-19 positive person.

Prepared by the Health Services Subcommittee of the National Emergency Committee/COVID-19 Task Force, Ministry of Health, Wellness and the Environment.
June 17, 2020.

PRESS RELEASE

FOR IMMEDIATE RELEASE
June 16, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

TWO (2) NEW COVID CASES

St. Vincent and the Grenadines today recorded two (2) new COVID-19 cases, following the receipt of eighty-three (83) PCR results from the Caribbean Public Health Agency – CARPHA. The new positive cases are both RCCL crew members who arrived here on Monday, June 15th. The Vincentian nationals, will now be isolated in a government facility for fourteen (14) days. A total of twenty-nine (29) COVID-19 cases have now been recorded in St. Vincent and the Grenadines.

Negative COVID-19 PCR results for the remaining 57 RCCL crew members who arrived on Monday 15th were also received. These Vincentians will continue mandatory quarantine for a period of fourteen (14) day. A second COVID-19 PCR test will be conducted prior to completion of this quarantine. The requirement for a second PCR test before the completion of quarantine is part of the revised repatriation protocol for groups deemed to be of higher risk for being exposed to the SARS-CoV-2 VIRUS.

All of the nineteen students who arrived from Barbados on Sunday June 14, tested negative by PCR COVID-19. The Disney Crew members who arrived yesterday June 15, are still awaiting the results of their PCR COVID tests and will continue in a government approved quarantine facility.

The Health Services Sub-Committee of the National Emergency Committee urges all Vincentians to remain vigilant and to support all of our returning nationals in their strict compliance with quarantine and isolation. The public is reminded that persons are placed in quarantine for stipulated periods because of their ongoing risk of being COVID-19 positive despite having a previous negative COVID-19 result.

MORE THAN 150 VINCENTIANS TO BE REPATRIATED

More than one hundred and fifty (150) Vincentians will be repatriated by sea and air during the week of June 14 to 20, 2020. Nineteen (19) Vincentians studying in Barbados will arrive today Sunday June 14, at the Argyle International Airport, while fifty-nine (59) Crew Members from Royal Caribbean Cruise Line (RCCL) and three (3) from Disney Cruise Lines (DCL), will arrive at Port Kingstown tomorrow June 15. Crew members employed by the Norwegian Cruise Line company are scheduled to arrive later this week. On arrival the nationals will be processed according to the established risk based repatriation protocols, aimed at minimizing any new introduction of COVID-19 to St. Vincent and the Grenadines.

Outstanding COVID-19 PCR results received from the CARPHA Public Health Lab over the past week revealed no new positive cases. St. Vincent and the Grenadines therefore continues to have two (2) active COVID-19 cases of a total of twenty-seven (27) recorded positive cases.

A post mortem conducted on the repatriated RCCL Crew member who sadly died on Tuesday June 9, confirmed that his death was unrelated to COVID-19.

The Health Services Subcommittee is reminding the public that it is still very important to maintain the public health measures previously advised, which include hand hygiene, cough etiquette, physical distancing of at least 3-6 feet in public spaces where feasible, the smart use of masks and strict adherence to quarantine and isolation. These measures are even more critical as more Vincentians return home and intraregional travel increases.

PRESS RELEASE

FOR IMMEDIATE RELEASE
June 9, 2020

205 RCCL CREW MEMBERS COMPLETE QUARANTINE

St. Vincent and the Grenadines now has only two (2) active cases of COVID-19 following the receipt today June 9, of ninety-one (91) negative COVID-19 PCR results from the CARPHA Public Health Laboratory. This batch of results included nine (9) negative results which were the second ones for nine (9) COVID-19 positive persons, medically clearing them.

Two hundred and five (205) RCCL Crew members were released from quarantine today following the receipt of the negative results for their second COVID-19 PCR. There are still one hundred and fifty-three (153) Crew members who have not had a result from a second PCR to clear them from quarantine. These Crew members are urged to remain in quarantine until the receipt of these results despite the expiration of the initial fourteen (14) days of mandatory quarantine.

The Health Services Sub-Committee of the National Emergency Committee urges all Vincentians to remain vigilant and to support all of our returning nationals in their strict compliance with quarantine and isolation.

PRESS RELEASE

FOR IMMEDIATE RELEASE
June 9, 2020

REPATRIATED SAILOR DEATH NOT DUE TO COVID-19

It is with deep sadness that the Health Services Sub-committee of the National Emergency Committee confirms that a Crew member who was repatriated on May 26, 2020 on the Royal Caribbean's Vision of the Seas died at the Milton Cato Memorial Hospital early today, June 9. The thirty-seven (37) year old man was one of 358 Vincentian sailors who disembarked the vessel on May 30 after testing negative on both the rapid and the first PCR COVID-19 tests. A second negative COVID-19 PCR test result received today confirmed that his death was not related to COVID-19. The Crew member completed his fourteen (14) days quarantine yesterday.

As per the laws of St. Vincent and the Grenadines, a post mortem examination will be conducted to confirm the cause of death.

The Health Services Sub-Committee of the National Emergency Committee wishes to extend its sincerest condolences to the family and friends of the deceased.

Kingstown, St. Vincent and the Grenadines

ONE (1) NEW COVID CASE AND ONE (1) MORE RECOVERY

St. Vincent and the Grenadines today recorded one (1) new COVID-19 case, following the receipt of one hundred and seventy-two (172) PCR results from the Caribbean Public Health Agency – CARPHA. The new positive case is a RCCL crew member who arrived here on Tuesday, May 26th, and previously tested negative on the COVID-19 PCR test done on arrival.

The Vincentian national, who was on mandatory quarantine, will now be isolated for a further fourteen (14) days. A total of twenty-seven (27) COVID-19 cases have now been recorded in St. Vincent and the Grenadines.

Negative results for a COVID-19 PCR test prior to release from quarantine for one hundred and thirty-two (132) RCCL crew members were also received, clearing the way for these persons to complete their quarantine on Monday June 8, 2020.

There are still two hundred and twenty-six (226) RCCL crew members awaiting a second PCR result in order to be released from quarantine. The requirement for a second PCR test before the completion of quarantine is part of the revised repatriation protocol for groups deemed to be of higher risk for being exposed to the SARS-CoV-2 VIRUS.

The most recent results also revealed that none of the thirty-four (34) persons repatriated from the United Kingdom on Wednesday June 3 were positive for COVID-19. These persons will all continue mandatory quarantine for a period of fourteen (14) days in private and public government approved facilities.

There is one (1) new recovery, bringing to sixteen (16) the number of persons who have recovered from COVID -19 in St. Vincent and the Grenadines. The eleven (11) active cases are all in isolation.

The Health Services Sub-Committee of the National Emergency Committee urges all Vincentians to remain vigilant and to support all returning nationals in their strict compliance with quarantine and isolation. The public is reminded that persons are placed in quarantine for stipulated periods because of their ongoing risk of being COVID-19 positive, despite having a previous negative COVID-19 result.

34 MORE VINCENTIANS TO BE REPATRIATED

Thirty-four (34) more Vincentians, including Twenty-nine (29) crew members from TUI and Carnival Cruise Lines, will be repatriated from the United Kingdom via Barbados later today, Wednesday June 3, 2020. On arrival at the AIA, the nationals will be processed according to the established repatriation protocol, aimed at minimizing the risk of any new introduction of COVID-19 to St. Vincent and the Grenadines.

Additional repatriations of Vincentians will continue throughout June 2020 and will include crew members from the Norwegian Cruise Line Company and Royal Caribbean Cruise Line.

By the end of today, one hundred and twenty-two (122) crew members from the Carnival Cruise Line and the Disney Cruise Line will successfully complete their mandatory quarantine.

On Saturday May 30, 2020, the two outstanding COVID-19 PCR results were received for the RCCL crew members and were both negative. This batch of results from CARPHA also confirmed the recovery of another COVID-19 positive person, bringing to fifteen (15) the number of persons who have so far recovered from COVID-19 in St. Vincent and the Grenadines. This means that there are now eleven (11) active cases of COVID-19 here.

The Health Subcommittee is reminding the public of the continued importance of maintaining the public health measures currently in place which include hand hygiene, cough etiquette, physical distancing of at least 3-6 feet in public spaces, the smart use of masks and strict adherence to quarantine and isolation. These measures are even more critical now that hundreds of Vincentians are returning home and intraregional travel increases.

Kingstown, St. Vincent and the Grenadines

ONE (1) NEW COVID CASE (amended)

St. Vincent and the Grenadines today recorded its 26th case of COVID-19, following the receipt of one hundred and fourteen (114) PCR results sent from the Caribbean Public Health Agency – CARPHA. **This new case is one of the Vincentian Crew members being repatriated on the RCCL Vision of the Seas.** There are now just two Royal Caribbean Cruise Line Crew members repatriated on the Vision of the Seas, without PCR results. These results should be received by Saturday, May 30. RCCL Crew members who tested negative on PCR will be allowed to disembark and continue strict quarantine at home.

There are now twelve (12) active cases of COVID -19 in St. Vincent and the Grenadines, eight (8) of which are from the Vision of the Seas. Fourteen (14) persons have already recovered. A total of twenty six (26) COVID-19 cases have now been recorded. All of the active cases are in isolation.

The Health Services Sub-Committee of the National Emergency Committee urges the public to support all persons who have been placed in mandatory quarantine, as we work together to ensure that there is no further spread of COVID-19 in St. Vincent and the Grenadines.

Kingstown, St. Vincent and the Grenadines

NO NEW POSITIVE COVID-19 CASES

St. Vincent and the Grenadines yesterday received one hundred and eighty (180) additional PCR results from the Caribbean Public Health Agency – CARPHA. These latest results, include one hundred and seventy-nine (179) for the Royal Caribbean Cruise Line crew members. No new positive COVID-19 cases were reported.

These negative PCR results from CARPHA are consistent with the negative results for the rapid tests performed by the RCCL Medical Team on board the Vision of the Seas, prior to the ship's arrival in St. Vincent and the Grenadines on Tuesday, May 26th.

There are still one hundred and fourteen (114) outstanding PCR results for the updated total of three hundred and fifty-eight (358) crew members repatriated by RCCL. Therefore, the disembarking process for the three hundred and twenty-nine crew members still on board the Vision of the Seas, will likely now commence on the morning of Saturday May 30.

A total of twenty-five (25) COVID-19 cases have been recorded in St. Vincent and the Grenadines, consisting of fifteen (15) cruise line crew members, four (4) other imported cases and six (6) from an import related cluster.

SEVEN (7) NEW COVID CASES

St. Vincent and the Grenadines yesterday recorded seven (7) new COVID-19 cases, following the receipt of seventy seven (77) PCR results from the Caribbean Public Health Agency – CARPHA. These latest results were received in batches during the evening of Wednesday May 27, 2020.

The new positive cases, all of whom had previously tested positive on rapid antibody tests, are from sixty five (65) tests belonging to Royal Caribbean Cruise Line (RCCL) crew members who arrived here on Tuesday, May 26th on the Vision of the Seas. The remaining fifty-eight (58) test results received on Wednesday 27 May, for the RCCL crew members were negative. There are two hundred and ninety-two (292) PCR results still outstanding for the RCCL crew members.

There are now eleven (11) active cases of COVID -19 in St. Vincent and the Grenadines. Fourteen (14) persons have already recovered. A total of twenty five (25) COVID-19 cases have now been recorded. All of the active cases are in isolation. RCCL Crew members who tested positive on rapid, but negative on PCR, will remain in a government approved quarantine facility, until a second PCR is conducted. Crew members who test negative for COVID-19 on both rapid and PCR will be allowed to disembark, to continue strict quarantine in approved private accommodations (their homes or privately rented apartments), when results for all crew members have been received.

The Health Services Sub-Committee will continue to endeavour to first ensure that all individuals are advised of their PCR COVID-19 results before the public is informed.

FOR IMMEDIATE RELEASE

May 25, 2020

Contact: Chief Medical Officer, Chair Health Subcommittee
Kingstown, St. Vincent and the Grenadines

Three hundred and fifty-six (356) Vincentians to be repatriated on Vision of the Seas

St. Vincent and the Grenadines will welcome home three hundred and fifty-six (356) Vincentian Crew members from the Royal Caribbean Cruise Line tomorrow, Tuesday May 26, 2020. The Vision of the Seas is expected to arrive in Vincentian waters at around four in the morning, with the sailors on board.

All three hundred and fifty-six of them will be screened for COVID-19, using rapid and PCR tests. Due to the time required to process this number of tests, it is anticipated that the Vincentian crew members may not complete disembarking the ship before Thursday May 28, 2020.

Crew members found to be positive for COVID – 19 will be placed in a government approved isolation facility until they have recovered as evidenced by two consecutive negative PCR COVID-19 tests. Crew members who are negative for COVID-19 will be allowed to quarantine in their private homes for the required 14-day period.

This enhanced repatriation protocol is aimed at minimizing the risk of importation of new COVID-19 cases into St. Vincent and the Grenadines posed by this

particular group of Vincentians. The increased risk was determined in view of reports of the presence of known cases of COVID-19 on the ships of origin of some of the crew members and more recent reports of crew members testing positive for COVID-19 on disembarking this particular ship.

The COVID-19 Task Force/Health Services Sub-committee is committed to reducing the risk of new importation and subsequent exposure of the Vincentian public to COVID-19. Every effort is being made and existing protocols will be continuously reviewed, to ensure that COVID-19 remains contained in St Vincent and the Grenadines.

Repatriated Disney Cruise Line Crew Members Test Negative for COVID-19

All twenty-five (25) results for the COVID-19 PCR tests done on the Disney Cruise Lines' Crew Members who returned to St. Vincent and the Grenadines on Wednesday May 20 are negative. This is according to reports received today Thursday, May21, 2020 from the CARPHA Public Health Lab.

The Disney Cruise Lines' Crew Members will continue their quarantine in a government approved facility for the entire fourteen (14) day period in keeping with the established quarantine protocols which refer to compliance with the conditions of quarantine, and the precautionary stance of the Health Services Subcommittee.

At the end of the quarantine period, a determination will be made on whether or not a second PCR COVID-19 test will be conducted on any crew member.

Meanwhile, on Monday May 18, 2020, thirty (30) Vincentian students studying in Jamaica returned home on a chartered flight. In keeping with the existing repatriation protocols, the students were screened on arrival at AIA for COVID-19 exposure, using rapid tests. Some of them were additionally subjected to COVID-19 PCR testing. All tests, both rapid antibody and PCR, were negative for all of the students.

These students, assessed as low risk, will complete the required fourteen (14) day quarantine in private homes and apartments.

Another new batch of students arrived today from Jamaica today, Thursday May 21. The fifteen will be subjected to the same repatriation protocols as required by the Health Services Subcommittee.

No new positive COVID-19 cases have been reported since May 19, 2020. St. Vincent and the Grenadines has so far reported eighteen (18) COVID-19 cases. The first case was recorded here on March 11, 2020. Four (4) of these cases remain active.

The public is reminded of the importance of proper hand hygiene, cough etiquette, physical distancing in public spaces and smart mask use. All persons currently in quarantine or isolation must strictly adhere to all of the relevant rules. Let us all ensure that we continue to slow the spread of COVID-19 in St. Vincent and the Grenadines.

FOR IMMEDIATE RELEASE

May 21, 2020

Contact: Chief Medical Officer, Chair Health Subcommittee
Kingstown, St. Vincent and the Grenadines

Twenty-Five (25) Vincentians Repatriated from Disney Cruise Line

St. Vincent and the Grenadines welcomed home twenty-five (25) Vincentian Crew members from the Disney Cruise Line yesterday, Wednesday May 20, 2020. All of the nationals disembarked and were subjected to screening for SARS-CoV-2 (the virus which causes COVID-19) exposure, utilizing rapid tests. The screening was conducted by the Port Health team.

After being briefed by Port Health officials on the process, the crew members awaited the results of these initial tests in coaches stationed on the cruise ship wharf. Rapid testing did not identify any crew member with antibodies to COVID-19, and the crew members were subsequently transported to the appropriate quarantine facility to begin their fourteen (14) day quarantine.

Additionally, in keeping with the revised protocol for the repatriation of crew members, swabs for PCR COVID-19 testing were also taken prior to disembarkation. This is aimed at further minimizing the risk of importation of new COVID-19 cases into St. Vincent and the Grenadines. The results for these PCR tests are still outstanding. Based on these additional test results and the compliance of the crew members to the court ordered quarantine, a determination will be made on whether further testing will be required and on where the Disney crew members will complete their fourteen (14) day quarantine.

ONE MORE COVID-19 POSITIVE CASE IN SVG, NO CARNIVAL CREW POSITIVE

St. Vincent and the Grenadines has recorded its eighteenth (18) positive COVID -19 case following receipt of results today from the CARPHA Public Health Lab. This new case, is an occupant of a home with two known positive COVID-19 cases. There were no other new positive results in this batch of 17 PCR COVID-19 tests, that included tests for the Carnival Crew members who returned to St. Vincent and the Grenadines on May 14, 2020.

There are now four (4) active and fourteen (14) recovered cases of COVID-19 in St. Vincent and the Grenadines,

The Health Services Subcommittee continues to stress the importance of maintaining the public health measures currently in place which include hand hygiene, cough etiquette, physical distancing of at least 3-6 feet in public spaces, face coverings and strict adherence to quarantine and isolation. The committee maintains that these measures are vital, if we are to continue to slow the spread of COVID-19 in St. Vincent and the Grenadines.

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

TWO MORE COVID-19 RECOVERIES

St. Vincent and the Grenadines now has fourteen (14) recovered COVID-19 cases, following the receipt of the second negative PCR result for two persons from the Caribbean Public Health Agency – CARPHA. These results were included in a batch of results for fourteen (14) samples sent on Wednesday May 13, 2020 to the regional Public Health Lab.

No new positive COVID-19 cases were reported. This means there are now just three (3) active cases of COVID -19 in St. Vincent and the Grenadines. All precautionary repeat PCR COVID-19 tests done on six (6) Carnival Cruise Line Crew members, in keeping with the May 13th updated repatriation protocol for crew members, were negative. Meanwhile, all Carnival Cruise Line Crew members repatriated on May 9th are advised to complete their fourteen (14) days of quarantine.

The public is again urged to maintain strict hand hygiene, cough etiquette, physical distancing in public spaces, smart mask use and strict adherence to quarantine and isolation instructions to ensure that we continue to slow the spread of COVID-19 in St. Vincent and the Grenadines.

Kingstown, St. Vincent and the Grenadines

THREE MORE COVID-19 PATIENTS RECOVERED

St. Vincent and the Grenadines now has twelve (12) recovered COVID-19 cases, following the receipt of results from the Caribbean Public Health Agency – CARPHA, today, (Tuesday May 12th, 2020). The results are from 23 samples sent on Monday May 11, 2020.

No new positive COVID-19 cases were reported. This means that there are now five (5) active cases of COVID -19 in St. Vincent and the Grenadines. All PCR COVID-19 tests done on the Carnival Cruise Line Crew members were negative. The affected Crew members will be released from quarantine within the next twenty-four (24) hours after final medical checks.

The importance of maintaining the public health measures currently in place including hand hygiene, cough etiquette, physical distancing of at least 3-6 feet in public spaces and strict adherence to quarantine and isolation, continues to be stressed.

Additionally, the correct and safe use of face coverings when physical distancing is not possible is recommended. These measures have proven to be very effective so far in slowing the spread of COVID-19 in St. Vincent and the Grenadines.

92 VINCENTIAN CARNIVAL CRUISE LINE CREW MEMBERS SAFELY HOME

St. Vincent and the Grenadines welcomed home ninety-two (92) Vincentians today, Saturday May 9, 2020. The Vincentian nationals, 91 of whom worked on various Carnival Cruise line vessels, were transferred to the Carnival Glory on May 2, 2020 in the Bahamas. One Vincentian transferred from the Caribbean Princess to the Carnival Glory in Vincentian waters on May 9, 2020. All of the Vincentian nationals disembarked after initially being screened for SARS-CoV-2 virus (the virus which causes COVID-19) exposure. This screening was conducted by the Medical Team on board the Carnival Glory using COVID-19 rapid tests.

Two (2) crew members, who both came from the same ship, were found on rapid testing to have been exposed to COVID-19. The Health Services Subcommittee has commenced further testing on those two (2) Crew members and their four counterparts, to determine whether or not they have active COVID-19 infections. All six have been quarantined in a government approved facility, until definitive PCR COVID-19 testing can be completed. The other eighty-six (86) crew members have commenced fourteen (14) days of mandatory quarantine in their private homes, apartments and guest houses.

St. Vincent and the Grenadines has had seventeen (17) PCR confirmed cases of COVID-19, nine (9) persons have fully recovered so far.

The Health Services Subcommittee reminds Vincentians of the importance of strict compliance with quarantine and isolation instructions to ensure that we maintain containment of COVID-19 in St. Vincent and the Grenadines. The public is asked to maintain the effective public health measures currently in place which have served to slow the spread of COVID-19 in St. Vincent and the Grenadines. The safe use of face coverings including homemade masks, along with hand hygiene, cough etiquette, and physical distancing should be strictly adhered to.

PRESS RELEASE

FOR IMMEDIATE RELEASE
May 3, 2020

Contact: Chief Medical Officer, Chair
Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

ONE MORE COVID-19 POSITIVE CASE IN SVG, ONE MORE RECOVERED

St. Vincent and the Grenadines has recorded its seventeenth (17) positive COVID-19 case according to reports received from the Caribbean Public Health Agency CARPHA. This case is part of the cluster whose first case was reported on April 21, 2020, and was identified as part of an aggressive contact tracing and testing campaign.

On Thursday April 30, results received medically cleared another person as having recovered from COVID-19. This means that there are now nine (9) recovered persons and eight (8) active cases of COVID-19 in St. Vincent and the Grenadines

The Health Services Subcommittee of the National Emergency Committee is reminding the public about the importance of maintaining the highly effective public health measures currently in place which include hand hygiene, cough etiquette, physical distancing of at least 3-6 feet in public spaces along with the smart use of masks. These measures must be maintained to continue to contain and slow the spread of COVID-19 in St. Vincent and the Grenadines.

Let us continue to share the responsibility of learning to live well in a world with COVID-19.

ONE MORE COVID-19 POSITIVE CASE IN SVG

St. Vincent and the Grenadines has recorded its sixteenth (16th) positive COVID -19 case. Today's new case is closely associated with the last three cases reported by the Caribbean Public Health Agency (CARPHA), and forms part of a small cluster of import related cases.

There are now eight (8) active cases of COVID-19 in St. Vincent and the Grenadines, with eight (8) persons who have fully recovered.

The Health Services Subcommittee reminds Vincentians of the importance of maintaining the effective public health measures currently in place which have served to reduce the spread of COVID-19 in St. Vincent and the Grenadines. The safe use of face coverings including homemade masks, along with hand hygiene, cough etiquette, and physical distancing must be strictly adhered to, along with compliance to quarantine and isolation instructions.

Kingstown, St. Vincent and the Grenadines

HEALTH SERVICES SUBCOMMITTEE ADVISORY: SOCIAL (PHYSICAL) DISTANCING — INTERNATIONAL WORKERS' DAY/MAY DAY - MAY 1, 2020

May 1 is observed each year in St. Vincent and the Grenadines as International Workers' Day or May Day, in recognition of the sacrifices and contributions of Vincentian workers. This year, the COVID-19 Task Force/Health Services Subcommittee of the National Emergency Committee would like the Vincentian public to specially acknowledge and celebrate the outstanding work of our teachers and first responders, Nurses, Police, Immigration and Customs Officers, Coast Guard and Doctors during this challenging time of COVID-19.

We suggest that a good way to recognize and acknowledge this outstanding work and help them to do their jobs more efficiently, will be to observe the following recommendations for May Day Friday, May 1, 2020:

1. Social Gatherings:
    a. Follow the "STAY SAFE! STAY AT HOME!" practice:
        i. There should be no river limes, boat rides, beach picnics, or parties or other such gatherings.
        ii. The operators of minivans and hired vehicles are asked to continue to ensure vehicle hygiene practices as they safely transport workers in essential services.

2. Physical distancing:
    a. Maintain at least 3 feet distance between you and others when in the public.

3. Hand hygiene:
    a. Wash hands frequently for at least 20 seconds with liquid soap and running water
    b. Use alcohol-based hand sanitizers if soap and water is not available.

    (Please visit www.facebook.com/SVGHealth for further information on the correct technique).

4. Facial (fabric masks) coverings:
    a. If traveling in public vehicles and standing in crowded places, the **correct use** of cloth masks (with a pouch to hold a surgical mask or flannel piece to provide additional protection) by the public is strongly recommended.
    b. The correct and safe use of masks requires that the front of the mask must not be touched, and cloth masks be washed regularly. (Please visit www.facebook.com/SVGHealth for further information on the correct use).
    c. At no time should the mask be placed on the chin or forehead.

These recommendations for limiting close contact and making close contact safe, will go a long way towards reducing the spread of COVID-19. St Vincent and the Grenadines has now recorded a small import related cluster of COVID-19. The support and corporation of all citizens are needed at this time, if we are to minimize any further spread of COVID-19 and to protect all of our workers.

Kingstown, St. Vincent and the Grenadines

ONE MORE COVID-19 POSITIVE CASE IN SVG, THREE MORE RECOVERED

St. Vincent and the Grenadines has recorded its fifteenth (15) positive COVID -19 case. This new case, is closely associated with numbers #13 and #14 reported on Tuesday, April 21 and Thursday 23, by the Caribbean Public Health Agency - CARPHA.

Chief Medical Officer Dr Simone Keizer Beache, says investigations have determined that the last three reported cases of COVID-19 in St. Vincent and the Grenadines form part of a cluster, due to import related local spread.

There are now eight (8) persons who have recovered from COVID-19, having each received the two negative COVID-19 tests required to be medically cleared. The new results for the latest three (3) recovered patients were received in the past twenty-four hours. There are now seven (7) active cases of COVID-19 in St. Vincent and the Grenadines.

Dr. Keizer Beache continues to stress the importance of maintaining the public health measures currently in place which include hand hygiene, cough etiquette, physical distancing of at least 3-6 feet in public spaces and strict adherence to

quarantine and isolation. Additionally, the correct and safe use of face coverings when physical distancing is not possible is recommended. These measures, Dr Keizer Beache maintains are vital, if we are to continue to slow the spread of COVID-19 in St. Vincent and the Grenadines.

Health Services Subcommittee
National Emergency Committee

Kingstown, St. Vincent and the Grenadines

HEALTH SERVICES SUBCOMMITTEE ADVISORY: SAFE USE OF FACE COVERINGS - MASKS

The Caribbean Public Health Agency (CARPHA) on Friday April 24, 2020, issued new guidance on the use of face masks in the context of COVID-19 Pandemic. The following is a summary of that guidance:

Summary:

On 11 March 2020, the Director-General of the World Health Organization (WHO) declared the outbreak of a novel coronavirus disease, COVID-19 as a pandemic. As of April 22, there are 9098 cases in 33 countries/territories (including 24 CARPHA Member States), in the Caribbean Region. The risk of further importation of cases to the rest of the Caribbean remains Very High. (1)

There is widespread debate on the need for community members to wear masks as a means of personal protection against COVID-19 infection. Many countries and leaders globally and in the Caribbean are adopting the widespread use of nonmedical masks as a strategy to reduce community transmission. This has been

coupled with concerns that broad use of masks could cause a run on the kind of masks that health care workers desperately need, as the supply chain for PPE has been disrupted, causing shortages worldwide.

The use of personal protective equipment such as medical (surgical) masks and respirators within the health care and home care settings, as well as during the handling of cargo has been outlined by the WHO in its updated guidance document on the rational use of personal protective equipment. [2]

According to WHO guidance, dated April 6, 2020, the use of medical masks in the community may create a false sense of security, with neglect of other essential measures, such as hand hygiene practices and physical distancing, and may lead to touching the face under the masks and under the eyes. Incorrect use of medical masks results in unnecessary costs.

The WHO indicated there is currently no evidence that wearing a mask (whether medical or other types) by healthy persons in the wider community has any value in preventing respiratory infections.[3]

There have been few randomized, controlled studies which address the effectiveness of cloth masks in the prevention of respiratory infections. However, as part of their response to COVID-19, some national health authorities have indicated that homemade/cloth masks may be better than no protection.

Whilst CARPHA acknowledges WHO's guidance, in keeping with the mandate to wear mask in public by many Caribbean countries, CARPHA advises its Member States to employ the use of the precautionary principle and encourages the correct use of masks (cloth/homemade) by the general population while they are out in public.

In view of this new guidance, the Health Services Subcommittee of the National Emergency Committee issues the following recommendations:

1. Persons using any type of mask (medical mask, respirator or cloth) must adhere to frequent and proper hand hygiene including washing hands with soap and water for at least 20 seconds or cleansing hands with 70% alcohol hand sanitizer, the immediate disposal of single use masks and the correct cleaning methods for reusable masks.

2. Encourages the use of masks (cloth/homemade) by the general population while they are out in public as a precautionary measure where physical distancing of at least 3 feet is not consistently feasible:
    a. When using public transportation such as minivans and multi-family private vehicles.
    b. When engaging service providers involving close contact (within 3 feet for 15 minutes) such as barbers, hair dressing salons, nail salons, beauty parlors, massage therapists, optometrists, ophthalmologists, dental practitioners, and tattoo artists.
    c. When patronizing or waiting to patronize business places such as banks, stores, restaurants, and professional establishments where crowding may occur.
3. Encourages the use of masks (cloth/homemade) when visiting the elderly.
4. **Physical distancing, hand hygiene and cough etiquette must still strictly be observed**.
5. Medical masks and respirators (e.g. N95 masks) should be reserved for use in hospital settings and by healthcare workers.
6. Persons with any symptoms of a cold or flu, such as fever, cough, or sneezing, should stay at home and contact their health care provider by phone.

Please visit www.facebook.com/SVGHealth for further guidance on safely putting on and taking off a mask, cleaning masks and other important information on the safe and smart use of masks.

St Vincent and the Grenadines now has a small cluster of import related local spread of COVID-19. Let us share the responsibility of keeping us healthy.

Dr. Simone Keizer-Beache
Chief Medical Officer
Chair Health Services Subcommittee
National Emergency Committee

Caribbean Public Health Agency

CARPHA

Priority must be given to healthcare workers regarding the use of medical face masks.

Do not take away masks from those in health care who need them most.

Community members may consider wearing face masks when **visiting busy, closed spaces**, such as groceries and pharmacies.

The use of face masks may be considered when **using public transportation.**

Face masks are a complementary measure.

They do not replace recommended preventative measures.

Hand hygiene

Cough and sneeze etiquette

Physical Distancing

Avoidance of touching your face

HOW TO WEAR, USE AND REMOVE A CLOTH/HOME-MADE FACE MASK

Coronavirus (COVID-19)

Perform hand hygiene using either soap and water or an alcohol-based hand rub.

This must be done before putting on the face mask and after removing it.

Hold the face mask by the straps ONLY. Place loops over each ear. Do not touch the inside of the mask.

Make sure the mask completely covers your nose and mouth.

The face mask should fit from the bridge of your nose down til your chin.

Make sure that there are no gaps between your face and the mask.

Only wear the mask for tasks/activities which require its use.

Do not touch your face or your mask. If you touch your mask accidentally, perform hand hygiene.

Hold the face mask by the straps and remove the mask by pulling it away from your face.

Do not touch the front of the mask. Perform hand hygiene after removing the mask.

After using a **cloth mask,** place it in a resealable plastic bag. Wash immediately after use with detergent at 60˚C.

Keep clean cloth masks in one bag and used ones in another bag.

Kingstown, St. Vincent and the Grenadines

ONE MORE COVID-19 POSITIVE CASE IN SVG, 6 NEGATIVE ONE MORE RECOVERED

St. Vincent and the Grenadines has recorded its fourteenth (14) positive COVID -19 case. Today's new case is closely associated with the one which was reported on Tuesday, April 21, by the Caribbean Public Health Agency CARPHA, the first since April 9, 2020. Chief Medical Officer, Dr Simone Keizer Beache, says investigations of these cases are continuing and have been productive thus far. However, it is still too early to issue a definitive statement on the source of infections.

On Wednesday April 22, results received medically cleared a fourth COVID-19 positive person, meaning that the individual is no longer exhibiting signs of the virus and has now recovered. The latest results (Thursday, April 23) received from CARPHA, also indicate that another individual has received medical clearance. Five persons have therefore recovered from COVID-19 in St. Vincent and the Grenadines. This means that there are now nine (9) active cases of COVID-19 in St. Vincent and the Grenadines.

Eight other persons who had samples tested at CARPHA over the last 48 hours as part of the ongoing COVID-19 surveillance were negative. To date, samples for 108 persons have been collected for PCR testing at CARPHA.

Dr. Keizer Beache is reminding the public about the importance of maintaining the public health measures currently in place which include hand hygiene, cough etiquette, physical distancing of at least 3-6 feet in public spaces and strict adherence to quarantine and isolation. These measures, Dr Keizer Beache maintains are vital, if we are to continue to slow the spread of COVID-19 in St. Vincent and the Grenadines.

The CMO notes that the Ministry of Health, Wellness and the Environment is cognizant of the need to keep the public aware of every development in respect of COVID-19 in St. Vincent and the Grenadines as we learn to live with it.

Dr Keizer Beache is assuring the public that the Ministry, the official source of COVID-19 information in St. Vincent and the Grenadines, remains committed to providing, timely, accurate and relevant information, as we continue to manage this public health challenge together.

Kingstown, St. Vincent and the Grenadines

SIX (6) MORE NEGATIVE COVID-19 RESULTS AND ONE NEW POSITIVE

The Caribbean Public Health Agency today (April 21, 2020) reported six (6) more negative COVID-19 and one (1) new positive result for St. Vincent and the Grenadines. One of the negative results provided medical clearance and confirms this country's third recovered COVID-19 case. There are therefore three (3) recovered COVID-19 cases in St. Vincent and the Grenadines.

The new positive COVID-19 case, which remains under investigation, brings the total number of confirmed cases in St. Vincent and the Grenadines to thirteen (13).

This new case of COVID-19 serves as a reminder about the importance of maintaining the public health measures currently in place, which include hand hygiene, cough etiquette, physical distancing of at least 3-6 ft in public spaces, and strict adherence to quarantine and isolation. These measures are vital, if we are to continue to slow the spread of COVID-19 in St Vincent and the Grenadines.

The Government of St. Vincent and the Grenadines will continue to keep the public informed as we manage this public health challenge together.

PRESS RELEASE

FOR IMMEDIATE RELEASE
April 21, 2020

Contact: Chief Medical Officer, Chair Health Subcommittee
Kingstown, St. Vincent and the Grenadines

NO EVIDENCE OF COMMUNITY TRANSMISSION OF COVID-19 IN SVG

The Ministry of Health, Wellness and the Environment. wishes to advise the public that there is no evidence of community transmission relative to COVID-19, in St. Vincent and the Grenadines.

On Tuesday, April 21, the Caribbean Public Health Agency CARPHA revealed a new positive COVID-19 case for St. Vincent and the Grenadines, the first since April 9, 2020. Since then, speculation has been rife, about the origin of this latest case.

According to the Chief Medical Officer Dr Simone Keizer, ongoing preliminary investigations into the new case point to a possible local transmission, since the individual in question has no known travel history. In distinguishing between local and community spread, Dr Keizer Beache

notes that according to CARPHA, Community Spread refers to instances where several people in a community test positive for COVID-19 without any known contact with an imported case. “Local spread” or a “Secondary case” describes a situation where the person was never abroad, but was exposed to an imported case, so that the source of the infection can be identified.

The CMO notes that the Ministry of Health, Wellness and the Environment is cognizant of the need to keep the public aware of every development in respect of COVID-19 in St. Vincent and the Grenadines.

Dr Keizer Beache is assuring the public that the Ministry, the official source of COVID-19 information in St. Vincent and the Grenadines, remains committed to providing, timely, accurate and relevant information, as we continue to manage this public health challenge together.

-END-

DEFINITIONS

Suspected Case definitions:

Case A	Case B	Case C
A person with: -fever -at least one sign/symptom of respiratory disease (e.g. cough, shortness of breath) -AND a history of travel during the 14 days prior to symptom onset	A person with: -fever -at least one sign/symptom of respiratory disease (e.g. cough, shortness of breath) -AND having been in contact with a confirmed COVID-19 case (in the last 14 days prior to symptom onset)	A person with: -fever -at least one sign/symptom of respiratory disease (e.g. cough, shortness of breath) -AND requiring hospitalisation -AND in the ABSENCE of an alternative diagnosis that fully explains the clinical presentation

Imported case vs local spread (secondary case) vs community spread:

Imported case:
- Exposed to COVID-19 abroad
- Developed symptoms in home country
- Tested positive

E.g. Husband

E.g. Wife

Secondary case:
- Was never abroad
- Exposed to an imported case
- Able to identify source of, or link to infection

Community Spread:
- Cases in the community where the source of, or link to infection is unknown

SECOND COVID-19 POSITIVE CASE NOW FULLY RECOVERED

St. Vincent and the Grenadines' second COVID-19 positive case has fully recovered and has received medical clearance. This was confirmed today (April 20, 2020) when the individual's second negative PCR test result was reported by the Caribbean Public Health Agency. This result means that there are now only 10 confirmed active COVID-19 cases in St. Vincent and the Grenadines.

The last COVID- 19 positive case was recorded over one week ago.

The Government of St. Vincent and the Grenadines will continue to keep the public informed, as we manage this public health challenge together.

PRESS RELEASE

FOR IMMEDIATE RELEASE
Sunday, April 19, 2020

Contact: Chief Medical Officer, Chair Health Services Subcommittee
Kingstown, St. Vincent and the Grenadines

NO NEW POSITIVES, THREE (3) MORE NEGATIVE COVID-19 RESULTS

The Caribbean Public Health Agency today (April 19th, 2020) reported another three (3) negative COVID-19 results for St. Vincent and the Grenadines. One (1) of these negative tests was for an isolated patient who had previously tested positive, and is part of the medical clearance process to determine whether the patient has recovered. This individual must now have another negative PCR test for COVID-19, in order to confirm recovery.

One other negative result, is the second such negative COVID-19 PCR for an ill patient in the Ministry of Health, Wellness and the Environment's care and is part of an ongoing comprehensive investigative management process. This patient has never tested positive for COVID-19. The third negative is for a new import related suspected case.

There are no new COVID-19 positive cases and therefore the number of confirmed COVID-19 cases reported in St. Vincent and the Grenadines remains at 12. One person has recovered as confirmed by two negative COVID-19 PCR tests reported by CARPHA. The last COVID- 19 positive case for St. Vincent and the Grenadines was recorded ten days ago on Thursday April 9, 2020.

The COVID-19 Task Force relies exclusively on the COVID-19 PCR test to diagnose active COVID-19 infection. Rapid immunoglobulin tests will only be used to determine possible past exposure and the presence of antibodies to COVID-19.

The COVID-19 Task Force wish to advise the public that there is no case of any individual testing positive for COVID-19, by rapid test or PCR, who is associated with any supermarket in St. Vincent and the Grenadines.

The COVID-19 Task Force in conjunction with the Ministry of Health, Wellness and the Environment, also wish to thank the public and all stakeholders as we continue to work together to slow the spread of COVID-19 in St Vincent and the Grenadines by practising the highly effective public health measures of hand hygiene, cough etiquette, physical distancing of at least 3-6 ft in public spaces and strict adherence to quarantine and isolation instructions.

The Government of St. Vincent and the Grenadines will continue to keep the public informed as together, we manage this public health challenge.

Seven (7) more Negative COVID-19 Results

The Caribbean Public Health Agency today reported seven (7) negative COVID-19 results for St. Vincent and the Grenadines. Two (2) of these negative tests are for patients under isolation as part of the medical clearance process. The other five (5) negative results were all import related suspected cases. The number of confirmed COVID-19 cases reported in St. Vincent and the Grenadines to date, remains at 12. There are currently six (6) pending results.

In an effort to keep Vincentians safe from COVID 19, the Ministry of Health, Wellness and the Environment is reminding the public to continue to practice the basic but highly effective public health measures. These include hand hygiene, cough etiquette, physical distancing of at least 3-6 ft in public spaces and strict adherence to quarantine and isolation instructions.

The Ministry of Health, Wellness and the Environment wishes to thank the public and all stakeholders for their efforts as we continue to slow the spread of COVID-19 in St Vincent and the Grenadines. The Government of St. Vincent and the Grenadines will continue to keep the public informed as we manage this public health challenge together.

PRESS RELEASE

FOR IMMEDIATE RELEASE
Thursday April 9, 2020

Subject: TWENTY-SIX NEGATIVE AND FOUR POSITIVE NEW CASES OF COVID -19 IN SVG

The Caribbean Public Health Agency today reported on the 30 pending samples. Twenty-six of the samples were negative and four were positive for COVID-19. This result brings the total number of positive cases of COVID-19 in St. Vincent and the Grenadines to 12. These are all imported cases. One of the patients has already made a full recovery. Thus, there are currently 11 active cases.

The patients, who have been informed, are all Vincentian nationals and have been in isolation since the samples were taken for testing. Monitoring of these patients is ongoing and all close contacts have been identified. All additional public health measures will continue including the implementation of additional quarantine where necessary.

The public is reminded to continue to practice the basic but highly effective public health measures of hand hygiene, cough etiquette, physical distancing and strict adherence to quarantine to keep us all safe from COVID-19. The Government of St. Vincent and the Grenadines will continue to keep the public informed as we manage this public health challenge together.

April 7, 2020

PRESS RELEASE

The Ministry of Education, National Reconciliation and Information wishes to inform all parents, guardians, teachers, students and other stakeholders that schools will remain closed for an additional two (2) weeks in the first instance, beyond the scheduled opening date of Tuesday, April 14, 2020.

The Ministry of Education will continue to be guided by the Ministry of Health, Wellness and the Environment regarding the reopening of schools. All efforts are being made to ensure that students are able to continue their academic journey through the use of different modalities of learning.

Let us all continue to work harmoniously to combat the challenges presented by the COVID-19 pandemic.

Please be guided accordingly.

ADJUSTMENTS TO OUTPATIENTS SERVICES

Further to a press release issued Sunday (April 5, 2020) on the suspension of outpatient services at the Milton Cato Memorial Hospital (MCMH) and the Modern Medical and Diagnostic Centre (MMDC), patients are asked to note they will be contacted by the Stewards Offices of the MCMH and the MMDC individually. Please note there is no need for you to visit district health centres unless for emergency care.

In light of the ongoing COVID-19 pandemic, the Ministry of Health, Wellness and the Environment continues to promote physical distancing. Please do not leave your homes unless necessary. When out in public, maintain 3-feet distance from other persons. Avoid crowded places and mass gatherings. Do not attend district clinics unless necessary. Please call your local health centre for information on repeating prescriptions.

For more information, please call 456-1185 extension 154, 110 or 158.

ADVISORY

HEOC/COVID-19 TASK FORCE ADVISORY: SOCIAL (PHYSICAL) DISTANCING – SPIRITUAL AND SOCIAL WELLBEING – EASTER WEEKEND

St. Vincent and the Grenadines is predominantly a Christian society. The upcoming Easter weekend therefore is a very important time for our Christian brothers and sisters. It is also a time of major socializing activities including boat rides, picnics and parties, as well as other forms of mass gatherings. The Ministry of Health, Wellness and the Environment recognizes the vital importance of spiritual and psychological health and wellbeing to overall wellness.

However, in keeping with the Ministry's Physical (Social) Distancing and Mass Gathering Advisory issued on March 22, 2020, and recommended hygiene practices, the HEOC/COVID-19 Task Force issues the following recommendations for the Easter weekend beginning Friday, April 10, 2020 to Monday, April 13, 2020.

1. Church Services – Good Friday and Easter Sunday:
    a. Consider not having any physical gatherings, rather:
        i. Consider a National Day of Prayer on Good Friday lead by Religious Leaders broadcasting from various media houses.
        ii. Consider broadcasting by radio and on social media platforms a National Ecumenical Easter Sunday Service conducted by a limited number of representative Ministers and Pastors, from a single place of worship capable of safely accommodating these officials.
    b. If physical gatherings must continue, then there must be strict enforcement of physical distancing in places of worship to ensure that persons are at least 3 feet apart from each other.

2. Social Gatherings:
    a. Follow the "STAY SAFE! STAY AT HOME!" practice:
        i. There should be no:
            1. Boat rides
            2. Picnics
            3. Goat cooks
            4. Beach outings
            5. River outings
            6. Parties
            7. Any other social gatherings whether private or public.

TEL. 784 457 2586 FAX. 784 457 2684
email: mohesvg@gmail.com/mohesvg@gov.vc

ii. Van Drivers are asked to protect themselves and their families by supporting this "STAY SAFE! STAY AT HOME!" guidance by staying off the roads for this period.

.

3. Hygiene Precautions:
    a. If traveling in public vehicles and standing in crowded places, the **correct use** of cloth masks (with a pouch to hold a surgical mask or flannel piece to provide additional protection) by the public is an acknowledged option. The correct and safe use of masks requires that the front of the mask is not touched, and they are washed regularly. (Please visit SVG HEALTH for further information on the correct use.)
    b. If caring for someone at home, use a surgical mask.
    c. Hand washing and the use of hand sanitizers are encouraged.

These recommendations for limiting non-essential contact are guided by scientific evidence and will go a long way to reduce the spread of COVID-19. St Vincent and the Grenadines now has seven (7) confirmed cases of COVID-19 on record. The support and corporation of all citizens are needed at this time, if we are to minimize any further spread of COVID-19.

Kingstown, St. Vincent and the Grenadines

Subject: Four More Confirmed Cases of COVID-19 in SVG

The Caribbean Public Health Agency just reported 4 additional confirmed cases of COVID-19 in St. Vincent and the Grenadines. These are all imported cases from either Canada or the United States of America all arriving on March 25, 2020. The number of confirmed cases reported in St. Vincent and the Grenadines to date now stands at 7. One of the patients has already made a full recovery. Thus, there are currently 6 active cases.

The patients are Vincentian nationals and have been in isolation since their samples were taken for testing. They are being monitored by health officials. The process of informing the patients and any possible earlier contacts has commenced. All additional public health measures will continue including the implementation of additional quarantine where necessary.

The public is reminded to continue to practice the basic but highly effective public health measures of hand hygiene, cough etiquette, physical distancing and strict adherence to quarantine to keep us all safe from COVID-19. The Government of St. Vincent and the Grenadines will continue to keep the public informed as we manage this public health challenge together. Thank you.

Kingstown, St. Vincent and the Grenadines

Subject: Third Confirmed Case of COVID-19 in SVG

Last night (at 9:46 p.m.), St. Vincent and the Grenadines registered its third confirmed case of COVID-19. It is also another imported case. The positive result was one of two results returned. The other result was negative.

The sample which tested positive was taken from a male patient who had travelled to SVG from Barbados on March 18, 2020. The patient had placed himself under voluntary quarantine from the time of his arrival in SVG. He developed symptoms on March 29 and informed healthcare workers about them on March 31, at which time a sample for COVID-19 testing was taken from him.

The patient, who is a Vincentian national, has been in isolation under close monitoring by health officials since the sample was taken. The process of informing the patient and any possible earlier contacts has commenced. All additional public health measures will continue including the implementation of additional quarantine where necessary.

The public is reminded to continue to practice the basic but highly effective public health measures of hand hygiene, cough etiquette, physical distancing and strict adherence to quarantine to keep us all safe from COVID-19. The Government of St. Vincent and the Grenadines will continue to keep the public informed as we manage this public health challenge together.

PRESS RELEASE

FOR IMMEDIATE RELEASE
Wednesday, April 1, 2020

Contact: Permanent Secretary
Kingstown, St. Vincent and the Grenadines

Subject: Medical Clearance for Original Confirmed Case of COVID-19 in SVG

The Ministry of Health, Wellness and the Environment just announced a second confirmed case of COVID-19 in St. Vincent and the Grenadines on the basis of laboratory results received from the Caribbean Public Health Agency.

The Ministry would now like to take this opportunity to inform the public the initial confirmed case of COVID-19 in SVG has received medical clearance. In order for medical clearance to be issued, 2 successive negative test results had to be received in relation to that patient. These 2 successive negative results have been attained.

Thus, there is now one active case of COVID-19 in SVG.

Further to the original release of today's date, the Ministry would like to clarify that the four (4) samples which were rejected by CARPHA were so rejected because they were drawn from patients without symptoms who therefore did not fit CARPHA's definition of a case requiring testing for COVID-19.

The Ministry and the government would continue to take all actions necessary to protect the health of Vincentians during the course of the coronavirus pandemic and at all times.

MARCH 28TH, 2020

HEALTH EMERGENCY OPERATIONS CENTRE/COVID-19 TASK FORCE ADVISORY: QUARANTINE FOR TRAVELERS TO ST. VINCENT AND THE GRENADINES

The Cabinet of St. Vincent and the Grenadines issued a revised list effective March 19th, 2020, of quarantine requirement for passengers arriving from the following countries:

1. China
2. European Union (including Italy, the Overseas Departments of France (Guadeloupe, Martinique, St. Martin, French Guiana)
3. Iran
4. South Korea
5. United States of America (including USVI and Puerto Rico)
6. Canada
7. United Kingdom

Individuals entering St. Vincent and Grenadines from the above listed countries will be subject to a **mandatory** quarantine for 14 days after leaving their port of departure. The quarantine will be actively monitored by Public Health Officials and members of the Royal St. Vincent and the Grenadines Police Force and Coast Guard, and will remain in effect whether the individual travels to or from the Grenadines.

The Ministry of Health, Wellness and the Environment will not hesitate to seek court orders to enforce this quarantine requirement as evidenced by the court orders secured and served on the entire group of passengers who arrived on AA 1427 on Saturday, March 28, 2020.

Additionally, effective March 28, 2020, all arriving passengers who meet the quarantine requirement will be required to sign an Undertaking to Quarantine form issued by the Ministry of National Security, Air and Seaport Development. Any breach of this undertaking will result in appropriate action under the Laws of St. Vincent and the Grenadines.

All persons previously instructed to be under quarantine are reminded that the instruction is mandatory and any breach may result in imprisonment and or a fine.

While in quarantine, the following steps should be taken:

1. Do not leave home. Do not go to work, school, other publics areas.
2. Do not use public transportation.
3. Arrange to have groceries and other necessities delivered.

HEOC/COVID-19 TASK FORCE ADVISORY: QUARANTINE REQUIREMENT FOR TRAVELLERS FROM CANADA

The Ministry of Health, Wellness and the Environment wishes to advise that the Cabinet of Ministers has informed that all travellers who arrive in St. Vincent and the Grenadines having been in Canada within the last 14 days, will be required to be quarantined for a period of 14 days.

Therefore, all travellers from the following countries will be quarantined for 14 days:

1. China
2. Iran
3. South Korea
4. United States of America including the USVI and Puerto Rico
5. United Kingdom
6. European Union including Italy and the Overseas Departments of France (Guadeloupe, Martinique, St. Martin, French Guiana)
7. Canada.

The general public is reminded that the requirement for quarantine is not optional. Individuals meeting the quarantine requirement must remain in their homes/accommodation at all times for the 14 day quarantine period.

ISOLATION OF SUSPECT COVID-19 CASE

The Ministry of Health, Wellness and the Environment wishes to inform the general public that one of the isolation transport chambers was utilized earlier today to safely transfer a patient from a private health care facility to the Kingstown District Flu Clinic for further assessment and management. While the patient does not meet all of the criteria of the case definition a COVID-19 suspect case, out of an abundance of caution, further investigations are being carried out including the specific COVID-19 test.

The Ministry of Health, Wellness and the Environment will continue to provide the public with additional information as it becomes available.

The Ministry of Health, Wellness and the Environment thanks the Vincentian public for their continued support and cooperation

MINISTRY OF HEALTH,
WELLNESS AND THE
ENVIRONMENT
Ministerial Building, Kingstown,
Saint Vincent and the Grenadines

March 22, 2020

HEOC/COVID-19 TASK FORCE ADVISORY: SOCIAL DISTANCING AND MASS GATHERINGS

The COVID-19 disease has spread around the globe to the Caribbean, including St Vincent and the Grenadines where there is still only one confirmed case. In order to reduce the likelihood of further spread within St. Vincent and the Grenadines, WHO has recommended "social distancing". Social distancing is a non-medical tactic used to keep people physically apart from each other, as close contact helps to spread the virus. Social distancing is particularly important to prevent the spread of COVID-19 because there is no vaccine to protect against the virus which causes this disease. Therefore, the Ministry of Health, Wellness and the Environment issues the following advisory to Faith Leaders, Event Organizers and the general public:

1. Faith leaders are asked to be socially, culturally and spiritually flexible at this time and be proactive to protect themselves and their congregation. The following measures are advised:
    a. As far as is possible reduce the number of church services and conduct services virtually if possible.
    b. Limit those attending church functions to a number that allows between 3 and 6 feet of space between persons in a seated group (typically 25 or less).
    c. Keep already planned weddings to a limited gathering of a maximum of 10 persons for the ceremony. The reception could be postponed.
    d. Postpone or cancel all non-essential social and cultural gatherings.
    e. Avoid visiting the house bound members especially the elderly. In this regard it is suggested that phone contact would be most appropriate. This will reduce the risk of infecting the vulnerable, sick and elderly.
    f. Limit those attending funerals to immediate family members (between 10 and 25 persons). An attendance by invitation only approach can be utilized.
    g. Keep members informed consistently with official, accurate and up-to-date information.

2. Event Organizers and the general public:
    a. Ensure no overcrowding at events and maintain at least three feet (six feet if possible) between people.
    b. Hygiene and physical distancing must be combined. Shaking hands, kissing and hugging as forms of greeting should be avoided. Consider smiling, waving or bumping elbows.
    c. Keep patrons informed consistently and constantly.

TEL. 784 457 2586 FAX. 784 457 2684
email: mohesvg@gmail.com/mohesvg@gov.vc

d. Avoid the lunchroom rush if you eat in the employee dining room, cafeteria, or a restaurant. Eat earlier or later, eat at home or eat with just a few people in a quiet area, inside or out.
e. Avoid using public pens at the retail counter, at the building or hotel guest registration, at the bank, in the revenue office, and other public places. Use your own pen. In conference rooms, don't use the public whiteboard markers. Carry your own.
f. Avoid the commuter rush periods where possible if you use public transportation. Employers should consider staggering start times for work and allowing work from homes. Avoid times when you'll be exposed to crowds.
g. Find a quiet place if you are in a public space such as a business office or restaurant.
h. Substitute tele-meetings for face-to-face meetings and reducing the number or duration of face-to-face meetings. Shift as much of the agenda as possible to email or teleconference.
i. Use larger conference rooms if you must meet face-to-face.

These recommendations for limiting non-essential contact are guided by scientific evidence, and will go a long way to reduce the spread of COVID-19. To date, St. Vincent and the Grenadines has recorded one confirmed case of COVID-19. The support and co-operation of all citizens are needed at this time, if we are to minimize any further spread of COVID-19.

Dr. Simone Keizer-Beache
